1 Dear Customer,

Thank you for your purchase of this CEREC AF® / CEREC AI® (CEREC Acquisition Flexible/CEREC Acquisition Integrated) and the Connect variants unit from Dentsply Sirona.

This device enables you to produce dental restorations, e.g. from ceramic material with a natural appearance (CEramic REConstruction).

Improper use and handling can create hazards and cause damage. Please therefore read and follow these operating instructions carefully. Always keep them within easy reach.

Also pay attention to the safety instructions to prevent personal injury and material damage.

Your
CEREC Team

1.1 Contact information

Customer service center

For technical questions, use the contact form on the internet at the following address:
http://srvcontact.sirona.com

Manufacturer's address

Sirona Dental Systems GmbH
Fabrikstrasse 31
64625 Bensheim
Germany

Tel.: +49 (0) 6251/16-0
Fax: +49 (0) 6251/16-2591
e-Mail: contact@dentsplysirona.com
www.dentsplysirona.com
2 General data

Please read this document completely and follow the instructions exactly. You should always keep it within reach.

Original language of the present document: German.

2.1 Structure of the document

2.1.1 Identification of the danger levels

To prevent personal injury and material damage, please observe the warning and safety information provided in these operating instructions. Such information is highlighted as follows:

<table>
<thead>
<tr>
<th>DANGER</th>
<th>An imminent danger that could result in serious bodily injury or death.</th>
</tr>
</thead>
<tbody>
<tr>
<td>WARNING</td>
<td>A possibly dangerous situation that could result in serious bodily injury or death.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>A possibly dangerous situation that could result in slight bodily injury.</td>
</tr>
<tr>
<td>NOTICE</td>
<td>A possibly harmful situation which could lead to damage of the product or an object in its environment.</td>
</tr>
<tr>
<td>IMPORTANT</td>
<td>Application instructions and other important information.</td>
</tr>
</tbody>
</table>

Tip: Information for simplifying work.
### 2.1.2 Formats and symbols used

The formats and symbols used in this document have the following meaning:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓</td>
<td>Prerequisite</td>
</tr>
<tr>
<td>1.</td>
<td>First action step</td>
</tr>
<tr>
<td>2.</td>
<td>Second action step</td>
</tr>
<tr>
<td>➢</td>
<td>Alternative action</td>
</tr>
<tr>
<td>ŭ</td>
<td>Result</td>
</tr>
<tr>
<td>➢</td>
<td>Individual action step</td>
</tr>
<tr>
<td>See &quot;Formats and symbols used [→ 7]&quot;</td>
<td>Identifies a reference to another text passage and specifies its page number.</td>
</tr>
<tr>
<td>● List</td>
<td>Designates a list.</td>
</tr>
<tr>
<td>“Command / menu item”</td>
<td>Indicates commands, menu items or quotations.</td>
</tr>
</tbody>
</table>
2.2 Legend

Year of manufacture

Safety labels
Identifies labels/imprints on the unit (see Safety labels).

"Hot surface" symbol

Product disposal symbol (see "Disposal [→ 81]").

Follow the operating instructions.
To ensure safe operation of the unit, the user must follow the operating instructions.

Symbol for 24 volt DC
Symbols on the packaging

Take note of the following symbols on the packaging:

Top

Protect from moisture

Fragile; handle with care

Temperature during storage and transport

Relative humidity during storage and transport

Air pressure during storage and transport
3 General description

3.1 Certification

CE mark

NOTICE
CE mark for connected products
Further products which are connected to this unit must also bear the CE mark.

Compliance
Anyone creating or changing a medical electrical system through a combination with other devices in accordance with standard EN 60601-1-1:2001 based on 60601-1-1:2000 (specification for the safety of medical electrical systems)/UL 60601-1 Part 1: first edition 2003 is responsible for ensuring that the requirements of these standards are met to the full extent in order to ensure the safety of patients, operators and the environment.
3.2 Intended use

In combination with the milling unit, the CEREC AF/CEREC AI/CEREC AF Connect/CEREC AI Connect unit is used to manufacture dental restorations, e.g. from a natural-appearing ceramic material. The unit may be operated only by medically trained and qualified personnel.

This unit must not be used for any other purpose. If the unit is used for any purpose other than the one mentioned above, it may be damaged.

Intended use also includes compliance with these Operating Instructions and the relevant maintenance instructions.

⚠️ CAUTION

Follow the instructions

If the instructions for operating the unit described in this document are not observed, the intended protection of the user may be impaired.

For the USA only

CAUTION: Federal law (USA) restricts sale of this device to or on the order of a physician, dentist, or licensed practitioner.
4 Safety

4.1 Basic safety information

4.1.1 Prerequisites

**NOTICE**

**Important information on building installation**

The building installation must be performed by a qualified expert in compliance with the national regulations. DIN VDE 0100-710 applies in Germany.

**WARNING**

**Electric shock**

In order to prevent the risk of an electric shock, this medical device must only be connected to a supply mains with a ground wire.

**NOTICE**

**Restrictions regarding installation site**

The system is not intended for operation in areas subject to explosion hazards.

4.1.2 Connecting the unit

Perform connection by following the directions given in the present operating instructions.

4.1.3 General safety information

**CAUTION**

**Do not damage the monitor**

DO NOT touch the LCD screen with sharp or pointed objects.

If the LCD monitor is damaged (e.g. the glass screen is broken), prevent any leaking liquid from coming into contact with your skin, mucous membranes (eyes, mouth), or foodstuffs and be careful not to inhale any escaping vapors.

Rinse any parts of your body or items of clothing already contaminated by the liquid with ample amounts of water and soap.

**CAUTION**

**Note on the prevention, recognition, and elimination of unintended electromagnetic effects:**

This system may be operated in a residential area provided that it is used under the responsibility of a medical specialist.
## 4 Safety

### 4.1 Basic safety information

#### CAUTION

If the unit is damaged, it must be decommissioned immediately and remain thus until it has been repaired by a certified engineer.

#### NOTICE

**Install only approved software**

To prevent interference with the runtime reliability of the program, only approved software may be installed.

- User version ≥ CEREC SW 4.4 (not for CEREC AF Connect/ CEREC AI Connect)
- Use version ≥ Sirona Connect SW 4.4
- Use version ≥ CEREC Ortho SW 1.1
- Use version ≥ Splashtop Streamer 2.6.5.4

### 4.1.4 Transporting the camera

#### CAUTION

**Trip/fall hazard**

When transporting the camera, be aware that you might trip over the cable and fall. This is particularly the case if the 50cm camera extension cable is used.

> When transporting the camera, please ensure that the free cable ends are coiled.

The camera can be detached from the storage cradle for use in treatment rooms.

### 4.1.5 Stability of the unit

#### NOTICE

**The CEREC AF/CEREC AF Connect unit could slip and fall off the table**

Please ensure that you place the cradle and camera on a flat surface. The round plate upon which the cradle is mounted is equipped with non-slip feet to prevent movement.

### 4.1.6 Maintenance and repair

As manufacturers of dental instruments and laboratory equipment, we can assume responsibility for the safety properties of the unit only if the following points are observed:

- The maintenance and repair of this unit may be performed only by Dentsply Sirona or by agencies authorized by Dentsply Sirona.
- Components which have failed and influence the safety of the unit must be replaced with original (OEM) spare parts.

Please request a certificate whenever you have such work performed. It should include:

- The type and scope of work.
- Any changes made in the rated parameters or working range.
- Date, name of company and signature.
4.1.7 **Modifications to the product**

Modifications to this product which may affect the safety of the operator, patients or third parties are prohibited by law!

4.1.8 **Accessories**

In order to ensure product safety, this device may be operated only with original Dentsply Sirona accessories or third-party accessories expressly approved by Dentsply Sirona. The user is responsible for any damage resulting from the use of non-approved accessories.
4.2 Safety labels

Plug connections of external PC interfaces

⚠️ CAUTION

Additional devices connected to external interfaces must be tested according to the relevant standards, e.g.:
They must be installed outside of the patient area (a radius of 1.5m surrounding the patient).

⚠️ CAUTION

Low voltages are applied to the coupling box for connecting external interfaces.
➢ Do not touch the pins of the connectors.

NOTICE

The externally connected cables must not be subjected to pulling stress.

⚠️ CAUTION

Trip/fall hazard

When installing the supply cable (the cable between the coupling box and the camera storage cradle) there might be a risk of tripping.
➢ Lay the cable so that there is no risk of tripping.
➢ Attach the supply line so that it remains fixed at all times.

⚠️ CAUTION

To maintain electrical safety, the PC must not be operated within the patient area (a radius of 1.5m surrounding the patient).

Heater plate
**CAUTION**

Risk of burns due to hot surface!

➢ Never touch the heater plate (A)!
4.3 Electrostatic charge

4.3.1 ESD warning labels

CAUTION
Risk of injury or damage to components from electrostatic discharge
For electrical components labeled with an ESD warning label, observe the following instructions.
➢ Apply the ESD protective measures.
➢ Do not touch connector pins or sockets without applying ESD protective measures first.
➢ Do not establish any connections between these connectors without applying ESD protective measures first.

The ESD warning label must be attached to the coupling box connector pins.

4.3.2 ESD protective measures

ESD stands for ElectroStatic Discharge.
ESD protective measures include:
- Procedures for preventing electrostatic charge build-up (e.g. air conditioning, air moistening, conductive floor coverings and non-synthetic clothing)
- Discharging the electrostatic charges of your own body on the frame of the UNIT, the protective ground wire or large metallic objects
- Connecting yourself to ground using a wrist band.

Training
We therefore recommend that all persons working with this system be instructed on the significance of this warning label. Furthermore, they also should receive training in the physics of electrostatic discharges which can occur in the practice and the destruction of electronic components which may result if such components are touched by electrostatically charged USERS.

The content of this training is explained in the Chapter "About the physics of electrostatic charges".
4.3.3 **About the physics of electrostatic charges**

**What is an electrostatic charge?**

An electrostatic charge is a voltage field on and in an object (e.g. a human body) which is protected against conductance to ground potential by a nonconductive layer (e.g. a shoe sole).

**Formation of an electrostatic charge**

Electrostatic charges generally build up whenever two bodies are rubbed against each other, e.g. when walking (shoe soles against the floor) or driving a vehicle (tires against the street pavement).

**Amount of charge**

The amount of charge depends on several factors:

Thus the charge is higher in an environment with low air humidity than in one with high air humidity; it is also higher with synthetic materials than with natural materials (clothing, floor coverings).

Electrostatic discharge must be preceded by electrostatic charging.

The following rule of thumb can be applied to assess the transient voltages resulting from an electrostatic discharge.

An electrostatic discharge is:

- perceptible at 3,000 V or higher
- audible at 5,000 V or higher (cracking, crackling)
- visible at 10,000 V or higher (arc-over)

The transient currents resulting from these discharges have a magnitude of 10 amperes. They are not hazardous for humans because they last for only several nanoseconds.

**Background**

Integrated circuits (logical circuits and microprocessors) are used to implement a wide variety of functions in dental/X-ray/CAD/CAM systems.

The circuits must be miniaturized to a very high degree in order to include as many functions as possible on these chips. This leads to structure thicknesses as low as a few ten thousandths of a millimeter.

It is obvious that integrated circuits which are connected to plugs leading outside of the unit via cables are sensitive to electrostatic discharge.

Even voltages which are imperceptible to the user can cause breakdown of the structures, thus leading to a discharge current which melts the chip in the affected areas. Damage to individual integrated circuits may cause malfunction or failure of the system.

To prevent this from happening, the ESD warning label next to the plug warns of this hazard. ESD stands for ElectroStatic Discharge.

Connector pins or sockets bearing ESD warning labels must not be touched or interconnected without ESD protective measures.
4.4 Wireless phone interference with equipment

The use of mobile wireless phones in practice or hospital environments must be prohibited to ensure safe operation of the unit.

4.5 Data transmission

Data communication between the CEREC AF/CEREC AI and the milling unit should preferably be via LAN cable.
5 Technical information

5.1 Technical description

CAD system for high-precision intraoral optical impressions

- High-resolution, heated oral camera (3D camera) with removable reflective sleeve (reflective sleeve sterilizable with hot air)
- Integrated image processing
- High processing power due to state-of-the-art processor
- Camera storage cradle can be disinfected by wiping.

High-resolution 3D intraoral camera with control and image processing electronics

- Measuring technique: Triangulation
- Light source: White LED, unpolarized, visible spectral range
- Image acquisition: Image control inside the camera
- Image data transfer: Gigabit Ethernet Standard

PC hardware requirements (V3.4.1)

Special PC with the following equipment:

- Processor: Intel i7 5820K
- Memory: 2 x 8GB, 2133MHz DDR4-RAM
- DVD-R(W)/CD-R(W): SH-224 combi drive
- Hard disk: 1TB 2.5" S-ATA SSHD
- Onboard network: Ethernet 10/100/1000MBit/s
- Network card: Ethernet 10/100/1000MBit/s intel PCIe
- WLAN card: TP-Link TL-WDN4800
- Sound card: Realtek HD Audio onboard
- Graphics card: AMD R9 285

PC software requirements

- Operating system: Windows Embedded Standard 7, 64 Bit
- Installation: The operating system is installed at the factory. During initial start of the PC, the language selection is made.

5.3 Electromagnetic compatibility

Observance of the following information is necessary to ensure safe operation regarding EMC aspects.

CEREC AF / CEREC AF Connect complies with the requirements for electromagnetic compatibility (EMC) according to IEC 60601-1-2:2001 and A1:2004.

CEREC AF / CEREC AF Connect is hereinafter referred to as "UNIT".

5.3.1 Electromagnetic emission

The UNIT is intended for operation in the electromagnetic environment specified below.

The customer or user of the UNIT should make sure that it is used in such an environment.

<table>
<thead>

<5% Uₜ for 5sec. (>95% dip of Uₜ) | The quality of the line power supply should be that of a typical commercial or hospital environment. |
| Magnetic field of power frequencies (50/60 Hz) according to IEC 61000-4-8 | 3 A/m | 3 A/m | Power frequency magnetic fields should be at levels characteristic of a typical location in a typical commercial or hospital environment. |

Remarks: Uₜ is the AC supply voltage prior to application of the test level.

Portable and mobile radio equipment must not be used within the recommended working clearance from the UNIT and its cables, which is calculated based on the equation suitable for the relevant transmission frequency.

Recommended working clearance:
### Interference immunity tests

<table>
<thead>
<tr>
<th>IEC 60601-1-2 Test level</th>
<th>Compliance level</th>
<th>Electromagnetic environment – guidelines</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conducted RF interference IEC 61000-4-6</td>
<td>$3 \ V_{\text{eff}} \ 150 \text{ kHz to 80 MHz}$</td>
<td>$3 \ V_{\text{eff}}$</td>
</tr>
<tr>
<td>Radiated RF interference IEC 61000-4-3</td>
<td>$3 \ V/m \ 80 \text{ MHz to 800 MHz}$</td>
<td>$3 \ V/m$</td>
</tr>
<tr>
<td></td>
<td>$3 \ V/m \ 800 \text{ MHz to 2.5 GHz}$</td>
<td>$3 \ V/m$</td>
</tr>
</tbody>
</table>

Where \( P \) is the nominal transmitter output in watts (W) specified by the transmitter manufacturer and \( d \) is the recommended working clearance in meters (m).

Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey\(^1\) should be less than the compliance level\(^2\) in each frequency range.

Interference is possible in the vicinity of equipment bearing the following graphic symbol.

**Remark 1**
The higher frequency range applies at 80 MHz and 800 MHz.

**Remark 2**
These guidelines may not be applicable in all cases. The propagation of electromagnetic waves is influenced by their absorption and reflection by buildings, objects and persons.

1. Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM/FM radio and TV broadcasts, cannot be predicted theoretically with accuracy. An investigation of the location is recommended to determine the electromagnetic environment resulting from stationary RF transmitters. If the measured field strength in the location in which the UNIT is used exceeds the applicable RF compliance level specified above, the UNIT should be observed to verify normal operation. If unusual performance characteristics are observed, it may be necessary to take additional measures such as reorientation or repositioning of the UNIT.

2. Over the frequency range 150kHz to 80 MHz, field strengths should be less than 3 V/m.
### 5.3.3 Working clearances

**Recommended working clearances between portable and mobile RF communication devices and the UNIT**

The UNIT is intended for operation in an electromagnetic environment, where radiated RF interference is checked. The customer or the user of the UNIT can help prevent electromagnetic interference by duly observing the minimum distances between portable and/or mobile RF communication devices (transmitters) and the UNIT. These values may vary according to the output power of the relevant communication device as specified below.

<table>
<thead>
<tr>
<th>Rated maximum output power of transmitter [W]</th>
<th>Working clearance according to transmission frequency [m]</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>150 kHz to 80 MHz</td>
</tr>
<tr>
<td>0,01</td>
<td>(d = [1.2] \sqrt{P})</td>
</tr>
<tr>
<td>0,1</td>
<td>0,12</td>
</tr>
<tr>
<td>1</td>
<td>0,38</td>
</tr>
<tr>
<td>10</td>
<td>1,2</td>
</tr>
<tr>
<td>100</td>
<td>3,8</td>
</tr>
<tr>
<td></td>
<td>12</td>
</tr>
</tbody>
</table>

For transmitters whose maximum nominal output is not specified in the above table, the recommended working clearance \(d\) in meters (m) can be determined using the equation in the corresponding column, where \(P\) is the maximum nominal output of the transmitter in watts (W) specified by the transmitter manufacturer.

**Remark 1**

An additional factor of \(10/3\) is applied when calculating the recommended working clearance between transmitters in the 80 MHz to 2.3 GHz frequency range in order to reduce the probability that a mobile/portable communication device unintentionally brought into the patient area could lead to interference.

**Remark 2**

These guidelines may not be applicable in all cases. The propagation of electromagnetic waves is influenced by their absorption and reflection by buildings, objects and persons.
6 Installation and startup

6.1 Transport and unpacking

All products from Dentsply Sirona are carefully checked prior to shipment. Please perform an incoming inspection immediately after delivery.

1. Check the delivery note to ensure that the consignment is complete.
2. Check whether the product shows any visible signs of damage.

**NOTICE**

*Damage during transport*
If the product was damaged during transport, please contact your carrying agent.

If return shipment is required, please use the original packaging for shipment.

6.2 Disposal of packaging materials

The packaging must be disposed of in compliance with the relevant national regulations. Please observe the regulations applicable in your country.

6.3 Major components

**CEREC AF**

The CEREC AF D3652 medical device includes the following main components:

- CEREC Omnicam Camera (for order with camera)  
  65 34 767 D3652
- Camera cradle  
  65 26 565 D3652
- Coupling box  
  65 32 084 D3652
- Medical power supply FSP030-RFAM  
  65 37 158 D3652
  

**CEREC AF Connect**

The CEREC AF Connect D3652 medical device includes the following main components:

- CEREC Omnicam Camera (for order with camera)  
  65 34 767 D3652
- Camera cradle  
  65 26 565 D3652
6 Installation and startup

*The corresponding option is only included in the scope of supply if selected with the order.*
6.5 Commissioning

Dentsply Sirona or a Dentsply Sirona authorized dealer will install the system as described and ensure that you are well instructed in how to operate the system. This includes a description of how to switch the system on or off.

**IMPORTANT**
Do not install an alternative virus scanner on your PC. Microsoft Security Essentials has been pre-installed.

6.5.1 Controls and functional elements

**Camera with cradle**

**NOTICE**
The camera with the camera cradle can be placed inside or outside of the patient environment. It must be ensured that the position of the camera cradle and the camera cable length enable the user to hold the camera in the mouth of the patient.

![Camera with Cradle Diagram](image)

<table>
<thead>

</tr>
<tr>
<td>E</td>
<td>Lock (engaged)</td>
</tr>
</tbody>
</table>

**PC**

**NOTICE**
The PC and its peripheral components of monitor, keyboard, and mouse must be set up outside of the patient environment.
NOTICE
Use only the PC supplied by Dentsply Sirona!

As of hardware version 3.4.2, the PC for CEREC AF / CEREC AF Connect is delivered in a housing that has a considerably smaller depth than the previous housing. This means that it can be installed in most furniture used when operating a PC. One model tested by Dentsply Sirona is the “B1DTC4” module from A-dec, designed for the American market.
### Dimensions of the PC as of hardware version 3.4.2

<table>
<thead>
<tr>
<th></th>
<th>Width (in mm)</th>
<th>Depth (in mm)</th>
<th>Height (in mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>in mm</td>

<td>435</td>
</tr>
<tr>
<td>in inches</td>
<td>7</td>
<td>14</td>
<td>17 ¾</td>
</tr>
</tbody>
</table>

**NOTICE**

The temperature inside the cabinet affects the performance of the PC. Full performance can only be guaranteed up to a temperature of 35°C (95°F) (measured at the air intake of the PC). A drop in performance can become apparent if the scanning process slows down when the temperature rises above 35°C (95°F).

- The cabinet should have an active ventilation or air extraction system; see the sketch for an example.
- It is particularly important to check the temperature inside the cabinet when the ambient temperature is higher (in summer, for example). If necessary, open the door or place the PC somewhere else.
Components of the Omnicam

A  Press detent to release  D  Camera windows
B  Mirror sleeve  E  Calibration set
C  Sapphire glass (coated)

**NOTICE**

CEREC Omnicam is calibrated
The CEREC Omnicam is calibrated ex works (see "Calibrating CEREC Omnicam [→ 74]").
6.5.2 Plug connections

**NOTICE**

Failure of the CEREC Omnicam
The CEREC Omnicam is a high-precision optoelectronic scanning instrument for non-contact impression taking which requires careful handling. Incorrect handling (impacts, dropping) leads to failure of the CEREC Omnicam.

➢ Always place the sensitive CEREC Omnicam in its cradle!

**NOTICE**

Do not damage cable
If you pull on the cable itself in order to unplug it or to check the plug connection, you will damage the cable.

➢ Never pull on the cable.

**NOTICE**

Positioning coupling box
The coupling box must be positioned outside of the patient environment.
The coupling box must not be placed on the floor.
The coupling box must not be positioned in the connection box of the treatment unit (applies to CEREC Al/CEREC AI Connect).

**CAUTION**

Positioning camera cradle
The camera cradle for the CEREC AF/CEREC AF Connect must be placed on a flat, horizontal surface either inside or outside of the patient environment. Ensure that the camera cradle cable does not pose a safety risk. This applies in particular to the use of the optional extension cable between the camera and camera cradle.

**CAUTION**

Trip/fall hazard
When installing the supply cable (the cable between the coupling box and the camera storage cradle) there might be a risk of tripping.

➢ Lay the cable so that there is no risk of tripping.

➢ Attach the supply line so that it remains fixed at all times.

1. Connect the PC to the mains voltage with the power cable.

**WARNING**

Hazard for patient and user
If you use a camera for the CEREC Al/Al Connect other than the supplied CEREC Omnicam, there is a risk of electric shock for patient and user.

➢ Only use the supplied CEREC Omnicam for CEREC Al/Al Connect. Do not use a CEREC Omnicam from a CEREC AC/AC Connect or CEREC AF/AF Connect.
2. Carefully insert the connector of the CEREC Omnicam cable into the coupling on the shorter of both cables at the camera cradle or the support arm cable of the CEREC AI/AI Connect, watching out for the guide nose.

3. **CAUTION! Trip/fall hazard!** Ensure that the supply cable between the coupling box and the camera cradle remains fastened at all times so that the cable cannot pose a trip hazard. Carefully insert the supply cable connector into the coupling of the longer of the two cables of the camera cradle (or, for CEREC AI/AI Connect, into the connection box of the treatment unit to connect to the supply cable on the camera cradle side), watching out for the guide nose. Connect the other end of the supply cable to the coupling box (see image below, connection C).

   ![Connection Diagram]

   | A | LAN connection for PC LAN cable |
   | B | USB connection for USB 2.0 cable |
   | C | Connection for supply cable (of the camera cradle) |
   | D | 24V connection for medical power cable |

4. Carefully connect the cable stated above (A, B, D).

5. Connect the LAN cable (A) on the PC side with the network connector labeled with Omnicam.

6. Connect the USB cable (B) to a USB port on the rear of the PC.

7. Plug the power cable of the medical supply unit into the power socket.

**Extension cable option**

The following applies for the optional integration of a 50 cm extension cable:

1. Carefully release the connection between the CEREC Omnicam cable and the camera cradle cable.

2. Carefully insert the connector of the CEREC Omnicam cable into the coupling on the extension cable, watching out for the guide nose.

3. Insert the extension cable connector (which is now connected to the CEREC Omnicam cable on the camera side) into the supply cable coupling, watching out for the guide nose, so that the connection with the coupling box cable is re-established.
Notes on network installation

CEREC AF/AI and the milling machine must be connected via LAN cable.

Your network operator must ensure that LAN cables and provided and installed so that you can connect the PC to the milling machine.

The network card is installed.
6.5.3 Switching the units on

Prior to initial startup

Prior to initial startup, the wireless keyboard stick must be connected to a USB port on the rear of the PC. As long as Windows has not yet been activated, the USB port to the front of the PC is not detected as such. You can reconnect the stick following activation on the front of the PC.

First startup

1. Switch on the PC for the first time. When activating the Windows settings, you will be prompted to make a language selection. This is a one-off procedure. This selection cannot be reset or changed at a later date.
2. Set the monitor to its maximum resolution or the resolution recommended by Windows.
3. Install the CEREC SW software on the CEREC AF /AI PC. For CEREC AF Connect/AI Connect, download the Sirona Connect SW software from the Sirona homepage. Confirm the firmware update for the CEREC Omnicam with "YES".
4. Install the Splashtop Streamer. For this purpose, refer to the Sirona Remote DVD and Operating Instructions (Sirona Remote DVD booklet). The Sirona Remote Client is pre-installed on the tablet. Establish a connection between the PC and tablet (see description in the Sirona Remote DVD booklet). For the language setting on the tablet, refer to "Tablet operating notes [→ 42]".

Following initial installation

Follow the following steps for proper operation after initial installation.
1. Switch the PC on with the ON/OFF button.

NOTICE

Possible data loss and PC malfunction:
Switching the PC off at the ON/OFF button during operation may cause data loss and PC malfunctions.
> Always switch the unit off as described in the chapter "Switching the units off [→ 42]".

2. Switch the monitor on.
   When the PC has started up and the coupling box is supplied with voltage, the illuminated green LED on the camera cradle indicates that the camera is ready for use. As long as the PC is switched off, the camera and heater are not supplied with power.

NOTICE

The two USB ports on the front of the PC are also supplied with power, if necessary, when the PC is switched off (depending on PC hardware version).
> Always connect the coupling box to a USB power on the rear of the PC.

3. Switch the milling unit on (see the Operating Instructions for the milling unit).
4. After loading the operating system, start the "CEREC SW" application by double-clicking on the "CEREC SW" button. Make sure that the CEREC Omnicam is already connected when starting "CEREC SW". Subsequent disconnection and re-connection is then possible without having to restart the "CEREC SW".

5. For descriptions of further software actions, online help can be accessed by pressing "F1" or via the Help... menu option.

**NOTICE**

Internet Explorer V 5.0 or higher must be installed on your system in order to use the online help function.

### Connecting the PC monitor via HDMI

If you have connected your monitor to the PC via HDMI, it may be the case that the image is surrounded by a black frame. In this case, proceed as follows to correct it:

1. Right-click on the desktop and select "AMD Catalyst Control Center".

2. In the window that opens, select "My Digital Flat- Panels" on the left-hand side and then select "Scaling Options (Digital Flat-Panel)" from the sub-menu.

3. In the scaling options, move the slider to the far right to 0% and save the changes.
6.5.4 Switching the units off

**NOTICE**

Proper shutdown procedure
The operating system must always be shut down properly to prevent data loss.

1. Exit all programs.
2. Power down the operating system.

**NOTE:** Now you can also switch the milling unit off if necessary.

6.5.5 Tablet operating notes

Depending on which tablet you received as part of the scope of delivery, please observe the notes in the following sections:

- Samsung Galaxy Tab S [→ 43]
- Dell Venue 10 Pro 5055 [→ 44]
- Dell Venue 10 Pro 5056 [→ 47]
6.5.5.1 Samsung Galaxy Tab S

The tablet is supplied with English language set as standard. Please observe the following when changing the language:

1. On the start screen, tap the "Settings" button.
2. Tap the "General" tab (A).
3. Touch the "Language and input" button (B) to the left.
4. Touch the "Language" button (C) to the right and select your language of choice.

The Sirona Remote Client is pre-installed on the tablet.
6.5.2 Dell Venue 10 Pro 5055

Basic operation of the tablet is explained below. Further notes and tips can be found in the documents accompanying the tablet, and on the manufacturer’s web page.

Keys

The tablet has four keys on the side of the device that are marked according to their function. The on/off switch, the Windows start key and another key to turn the volume up or down.

Windows 8.1

The Windows 8.1 operating system has navigation options that are specially tailored to operate tablets:

Start screen

- You can return to the start screen at any time with the start button. If a keyboard is connected to the tablet, the Windows keyboard fulfils the same function. The usual Windows PC desktop view can be reached here via the button labeled “Desktop”.
- Swipe inward from the right screen margin. The “Charms” menu (Charm bar) opens, where you can operate basic functions by selecting the gear symbol and switch the device off, for example.
- If you swipe inward from the left margin of the screen, you switch to the previous App used (application).

Language setting

The tablet is supplied with English language set as standard. The tablet system language and the layout of the on-screen keyboard can be
changed. On delivery, the pre-installed languages are English (US), English (GB), German, French, Italian and Spanish.

1. To change the language, press the start button.

2. On the start screen, press the gear symbol.

3. In the list on the left side, choose the “Time and language” item and then “Region and language”.

4. Now you can switch to another language, by selecting this and tapping “Set as primary”.

5. In order to activate the new language, you have to log out of Windows and then log in again. To do so, press the Start key, tap on the user shown in the top right, “CEREC”, and in the drop down menu, select “Sign out”.

Via “Add a language”, even more languages that are not pre-installed can be added to the system. Please be advised that an Internet connection is required for this and that the process in this instance takes some time to complete. The connection with a WIFI network is described in the following section.

Establishing a connection with a WIFI network

In the Desktop view, a WIFI connection can be established as normal, via the symbol in the Task bar.

Alternatively, access the Charms menu at any time and the gear symbol displayed there can be used to change the settings for the WIFI connection.

Notes on the Windows update

The tablet displays the content of the CEREC PCs, simplifies system operation during acquisition and can also be used to interact with patients. The tablet does not require an Internet connection for this. Windows updates are disabled in order to cause as little disruption to work as possible.

If you wish to use the tablet to surf the Internet or if your practice network already has an Internet connection, we advise you activate the
Windows updates. This is possible via PC settings, which are located at the bottom of the menu item “Update/Recovery” (accessible via the Start key and by selecting the gear icon). However, we recommend operation without an Internet connection and without automatic updates, as otherwise it cannot be guaranteed that the tablet operating system will not install updates during treatment. This can lead to unwanted malfunctions or even a restart during ongoing operation.

Starting Sirona Remote

The Sirona Remote application is pre-installed and can be started via the corresponding symbol or via the desktop (by double-clicking), as well as from the start page (single click).
6.5.5.3 **Dell Venue 10 Pro 5056**

Basic operation of the tablet is explained below. Further notes and tips can be found in the documents accompanying the tablet, and on the manufacturer’s web page.

**Keys**

The tablet has four keys on the side of the device that are marked according to their function. The on/off switch, the Windows start key and another key to turn the volume up or down.

**Windows 10**

The Windows 10 operating system can be operated in two different modes: the normal desktop view and a mode specially tailored to operating tablets. As Sirona Remote is a desktop application, the tablet is delivered in this mode.

Notes on operating the tablet:

- You can access the most important device settings by swiping inward from the right edge of the screen. Here you can control the screen brightness, for example, or turn WIFI on or off.
- By clicking on the gear symbol in this menu, you can access all settings of the device and operating system.
- If you swipe inward from the left edge of the screen, you can switch between all open applications quickly.
- To turn off the device or switch to standby, press the start button or click on the start symbol in the bottom left and then on the switch on/off symbol.

**Language setting**

The tablet is supplied with English language set as standard. The tablet system language and the layout of the on-screen keyboard can be changed. On delivery, the pre-installed languages are English (US), English (GB), German, French, Italian and Spanish.

1. To change the language, swipe from right to left on the screen.
2. Press the gear symbol.
3. Select the **Time & language** group and then **Region & language**.
4. Now you can switch to another language, by selecting this and tapping "Set as default".
5. In order to activate the new language, you have to log out of Windows and then log in again. To do so, open the start menu, tap on the user shown in the top left, "CADCAM", and in the drop down menu, select "Sign out".
6. Via "Add a language", even more languages that are not pre-installed can be added to the system. Please be advised that an Internet connection is required for this and that the process in this instance takes some time to complete. The connection with a WIFI network is described in the following section.

**Establishing a connection with a WIFI network**

A WIFI connection can be established as normal, via the symbol in the Task bar.
Starting Sirona Remote

The Sirona Remote application is pre-installed and can be started in three different ways:

- Via the symbol on the desktop (double click).
- Via the symbol in the task bar (single click).
- Via the symbol in the start menu or on the home page (single click).
7 Operation

Make sure that the CEREC Omnicam is already connected when starting "CEREC SW". Subsequent disconnection and re-connection is then possible without having to restart the "CEREC SW".

7.1 Camera warm-up time

When switching on the system, the camera needs to warm up for 15 - 20 minutes. If the coated sapphire glass of the Omnicam is not sufficiently warm, it may steam up during the acquisition. As such, it is not possible to carry out the exposure.

Following use, always position the Omnicam on the heater plate.

You can set the end temperature to which the camera heater warms the Omnicam mirror sleeve.

1. In the software, navigate to the system menu and click on the "Configuration" button.
2. Click on the "Devices" button.
3. Click on the "Omnicam" button.
4. Click on the "Camera Heater Settings" button.
5. Use the slider to adjust the temperature.

7.2 Adjusting the CEREC Omnicam

You can adjust the CEREC Omnicam in the device configuration.

1. In the software, navigate to the system menu, and click on the "Configuration" button.
2. Click on the "Devices" button.
3. Click on the "Omnicam" button.

Accepting settings
➢ Click on the "Ok" button.

Discarding settings
➢ Click on the "Cancel" button.
7.3 Taking acquisitions with the CEREC Omnicam

**CAUTION**

Hot surface!
The coated sapphire glass of the CEREC Omnicam is preheated in the camera cradle. When removing the CEREC Omnicam from its cradle, the surface temperature of the mirror sleeve can be up to 51°C. This may cause an unpleasant heat sensation on contact with a person's skin or mucous membrane. These temperatures will not damage the skin or mucosal membrane.

After removing the CEREC Omnicam from the camera cradle, the temperature of the mirror sleeve drops within a few minutes (<5 minutes) to less than 43°C. The CEREC Omnicam is therefore suitable for use in the patient's mouth for an unlimited period of time.

At an ambient temperature from 30°C, only select the three lower heater settings.

The surface temperature of the mirror sleeve can reach up to 51°C when the camera has been operating continuously for more than 20 minutes in an ambient temperature of more than 30°C.

**NOTICE**

Image brightness

The image brightness during the acquisition is controlled automatically, so that there is always optimum image brightness, largely independent of the distance between the CEREC AF/CEREC AI/CEREC AF Connect/CEREC AI Connect and the tooth.

The surroundings of the tooth to be scanned should be as weakly illuminated as possible. Avoid any type of external light. Switch off the operating light.

**IMPORTANT**

Do not use cotton rolls in the scan area

Do not use any cotton rolls in the vicinity of the scan area. Should any pieces of cotton roll contaminate this area, the acquisitions will be inaccurate.

**CAUTION**

Prevent cross-contamination

Germs can be transmitted to uncontaminated persons via the hands, materials or objects.

➢ For hygiene reasons, wear a new set of disposable gloves for each patient while using the CEREC Omnicam.

**CAUTION**

In the case of patients with allergies to nickel

Should the CEREC Omnicam mirror sleeve make contact with the skin of patients allergic to nickel, allergic reactions may occur.

➢ Ensure that in the case of patients with nickel allergies, the parts of the CEREC Omnicam mirror sleeve which may make contact are protected from areas of skin.
**WARNING**

**Danger of injury in the case of diagnosed epilepsy**

Patients who have been diagnosed with epilepsy cannot be treated with the CEREC Omnicam.

Dentists and dental assistants who have been diagnosed with epilepsy cannot work with the CEREC Omnicam.

- The teeth are blow-dried

1. Change to phase "ACQUISITION".
   - The camera is ready for scanning.
   - A live image appears which can be used to look around the patient's mouth.

2. Remove the CEREC Omnicam from its holder.
   - As soon as the camera is pointed over a tooth or the gums, data acquisition begins. During the continuous data acquisition, a color 3D model is generated automatically on the screen. A white field indicates in which area data will be acquired. If the automatic data flow breaks off, the white field is lost and the audio signal changes. In this case, move the camera to any area which has already been scanned. The scanning procedure continues.

3. Point the cursor to the Omnicam icon in the bottom left corner to end the acquisition procedure.

**Proceeding with scanning procedure**

1. Click on the Omnicam symbol with the cursor.
   - The scanning procedure begins.

2. Proceed with the scanning procedure as described above.

**CAUTION**

After use, move the camera in its cradle out of the patient environment to avoid any unforeseen damage to the CEREC Omnicam.
7.4 Directing the camera

**CAUTION**

*After each use*

Prepare the camera once again after each patient.

➢ Follow the instructions in the "CEREC Omnicam [→ 65]" section in order to avoid cross-contamination between patients.

The CEREC Omnicam acquires images which are used during the ongoing measurement in spatial relation to each other (image registration).

During the acquisition and then during the ongoing registration process, a distinctive sound can be heard.

If the registration cannot be implemented, the acquisition flow is suspended. You are informed of this by means of a sound. This is different to the sound emitted during successful acquisition. You can adjust the volume in configuration.

**IMPORTANT**

*Registration error*

Should a registration error occur, you must return to another acquired point.

To start with, practice this procedure on the model and then on intraoral areas.

➢ Move the CEREC Omnicam to a position where a successful acquisition was taken. A point that has already been acquired in the occlusal area is best.

➢ You will be able to hear the sound for registered acquisitions.

➢ Continue the acquisition.

Divide the acquisition into four consecutive sequences:

1. Occlusal
2. Buccal
3. Lingual
4. Proximal
7.4 Directing the camera

7.4.1 Occlusal scan

**Important:** Ensure that the distance between the coated sapphire glass of the CEREC Omnicam and the scanned surface is observed. The distance must be between 0-15 mm (ideally: 5 mm). The camera does not rest on the teeth or the gums. If the distance is too great, no data will be obtained.

1. Move the CEREC Omnicam to the starting position. For this purpose, the CEREC Omnicam is in the occlusal view of the tooth, which is next to the prepared tooth in the distal direction.
2. Scan in the mesial direction. To do so, slowly move the CEREC Omnicam in the occlusal direction from the distal-positioned tooth over the prepared tooth to the mesial-positioned tooth.

With full jaw acquisitions, the scan sequence is different for the transition to anteriors. Scanning begins with the lingual and labial areas, before moving on to the incisors.

7.4.2 Buccal scan

- The CEREC Omnicam is on the adjacent tooth, in the mesial direction to the preparation.
1. Rotate the CEREC Omnicam between 45° to maximum 90° toward the buccal.
2. Guide the CEREC Omnicam over the entire buccal distance in the distal direction over the prepared tooth.

With full jaw acquisitions, limit the buccal scan to no more than a quadrant.

Ensure that the CEREC Omnicam is held like a flute during buccal scans. Do not tilt it vertically to the direction of motion.

**Tip:** Practice guiding the camera between 45° and 90°.
7.4 Directing the camera

7.4.3 Lingual scan

- The CEREC Omnicam is on the tooth that is positioned next to the preparation in the distal direction.
1. Rotate the CEREC Omnicam from 90° in the buccal direction to around 45° to maximum 90° in the lingual direction on the other side.
2. Guide the CEREC Omnicam over the entire lingual distance in the mesial direction over the prepared tooth.

7.4.4 Approximal surface scan

Scan the approximal surfaces of the prepared tooth.

- Move the CEREC Omnicam in the occlusal direction to the prepared tooth. Acquire the approximal surfaces in the distal and mesial direction by using a wave motion in the occlusal, buccal, and lingual direction over the prepared tooth.
   To do so, tilt the surface by 15° in the distal and mesial direction to gain a better view of the approximal contacts.

Notes:

- Remove the soft tissue.
- Cut away the moveable gingivae, so that only 2-5 mm gingivae remains around the tooth.
- When performing this activity, be careful not to accidentally cut out any areas that e.g. are located behind the model or are otherwise cut away from the line.
- This cut must be completed during the ACQUISITION phase using the cutter.
7.4.5 **Buccal registration**

A buccal registration can be used to establish contact with the antagonist.

- The jaw with the preparation is scanned.

1. Scan the occlusal, buccal and lingual view of the antagonist (see the section "Occlusal scan [→ 53]", “Buccal scan [→ 53]” and “Lingual scan [→ 54]").

2. Perform a buccal scan of the bite block prior to completing the registration. This buccal scan should be carried out close-up to the preparation. To acquire sufficient geometry, capture the teeth of the upper and lower jaw as well as 5 mm of the respective gingival areas.

7.4.6 **Scan procedure for the color analysis**

Do not guide the Omnicam exclusively at the same distance to the tooth when carrying out the color analysis.

Vary the distance to the tooth for the scan of the buccal surface of the tooth for which you wish to carry out a color analysis of the buccal surface.

Ensure that you avoid reflections (highlights) on the buccal surface by tilting the Omnicam slightly during the scanning process.
7.4.7 **Scanning the quadrant and jaw**

The following scan regulation applies for the acquisition of a complete quadrant or jaw arch.

The first (fourth) quadrant is scanned up to the opposite second front tooth by moving the camera in parallel along the jaw arch.

**Start the scanning process**

➢ Position the camera occlusally above the last tooth on the right, to start the scanning process.
Completing the scanning process

1. Start as indicated above, on the occlusal surface of the right terminal tooth, and scan it occlusally. Tilt the camera by 45° in a palatinal direction (oral) and guide it from the distal to the mesial.
2. Tilt the camera another 45° in a palatinal direction (oral) and move it in a distal direction.
3. Tilt the camera by 90° on to the occlusal surface and move it in a mesial direction.
4. Tilt the camera in a 45° buccal direction and move it back towards the distal.
5. Then tilt the camera a further 45° in a buccal direction to a total of 90° and move it in a mesial direction again.
The following scan sequence is implemented for the opposite second (third) quadrant:

1. Start by placing the device on the occlusal surface of a premolar, that has already been scanned, and guide the camera palatally (orally) at a mesial tilt of up to 90° across the lingual surface of the front teeth in a distal direction towards the terminal tooth.

2. Slight tilt the camera by 45°, so that the camera is only tilted by 45° in a palatinal direction (oral) moving from the distal and back to the mesial to the front teeth.

3. Once you have reached the area of the front tooth, guide the camera 45° to the buccal side and tilt the camera by 45° from the mesial to the distal direction.

4. Once you have reached the distal, tilt the camera by another 45° (total of 90°) further towards the buccal and guide the camera from the distal back to the mesial direction.

5. Once you have reached the area of the front tooth, tilt the camera in an occlusal direction and guide the camera mesially to the occlusal surfaces right to the back distal molars.

Notes:
- Remove the soft tissue.
- Cut away the moveable gingivae, so that only 2-5 mm gingivae remains around the tooth.
7.4 Directing the camera

- When performing this activity, be careful not to accidentally cut out any areas that e.g. are located behind the model or are otherwise cut away from the line.
- This cut must be completed during the ACQUISITION phase using the cutter.

7.4.8 Completing measurements

✔ The exposures are complete.

1. Click on the “Next” button.
   - The virtual model is calculated and displayed in color.
   - Gray sections highlight data material that is missing from the calculated model.

2. If missing data emerges in the preparation area, carry out further scans.

3. Change back to the ”ACQUISITION” phase. Perform additional scans to complete the model structure.

NOTICE

Snapping in the lock
When putting the camera back, ensure that the cradle lock is engaged (see ”Controls and functional elements [→ 33]” Point E).
7.5 Software for the CEREC Omnicam

Refer to the Operator's Manual for more information on using the CEREC SW and the CEREC Premium SW.

You can find additional information on setting the CEREC Omnicam in the "Adjusting the CEREC Omnicam" section of these Operating Instructions.

7.5.1 Cut out model areas

With the "Cut" function, you can should be able to cut out model areas. These can be areas in which parts of cotton rolls or cheeks were unintentionally acquired.

When performing this activity, be careful not to accidentally cut out any areas that e.g. are located behind the model or are otherwise cut away from the line.

You can execute another scan of the area which you have cut out using the crop function. To do so, close the tool window, by clicking on the top right corner. You can refill the area with another acquisition.

"Undo" and "Reset"

With the "Undo" button in the tools you can undo all changes made on the selected restorations since the tool was started.

With the "Reset" button in the tools you can undo all changes made on all restorations since the tool was started.
8 Maintenance

**IMPORTANT**

If the PC, CEREC Omnicam, or other components are damaged, the system must be immediately decommissioned. Contact the customer service department for your dealer.

**NOTICE**

Regular inspection

Some countries have legal regulations which require regular safety inspections of electrical devices or systems by the operator. Dentsply Sirona would like to draw your attention to the fact that a so-called "retest" (repeat test) must be carried out for the CEREC AF / CEREC AF Connect acquisition unit at least every three years. In addition, this retest also must be performed following every repair or retrofit of components such as the PC, the PC power supply, the CEREC Omnicam camera, and the camera cable.

**NOTICE**

Annual maintenance performed by trained technical personnel is recommended.

8.1 Care, cleaning, disinfection, and sterilization

**NOTICE**

Approved care, cleaning, and disinfecting agents

Use only care, cleaning, and disinfecting agents approved by Dentsply Sirona!
8.1.1 Cleaning agents and disinfectants

Authorized care, cleaning agents, and disinfectants

<table>

8.1.2 Monitor screen

Cleaning

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never spray the monitor screen with disinfectant or cleaning agents!</td>
</tr>
</tbody>
</table>

The monitor screen must be wiped with a soft cloth.
8.1.3 Non-critical surfaces with no monitor screen

**NOTICE**

Never use corrosive cleaning agents, wax or solvents.

1. Use a new absorbent cotton gauze which is moistened with one of the cleaning agents listed in the "Cleaning agents and disinfectants [→ 62]" section to disinfect the non-critical contact surfaces of the product, such as the camera holder, mouse and keyboard.

2. Dispose of the absorbent gauze.

Please ensure that no colored cloths are used for this as these can result in discoloration of the surfaces, e.g. when used in combination with disinfectants.

**Protection against medicaments**

Due to their high concentrations and the substances they contain, many medicaments can dissolve, etch, bleach or discolor surfaces.

**NOTICE**

The only way to prevent damage is to wipe off medicaments immediately with a damp cloth and a cleaning agent!
8.1.4 Tablet

⚠️ CAUTION
The tablet must not be connected during use or when it is within the patient environment. It must not be charged during this time.

When using the tablet, please ensure that the charge level is sufficient to complete an entire CEREC application. During the treatment, the tablet must not be charged in the vicinity of the patient in the treatment unit.

⚠️ CAUTION
Using protective sleeve
Please ensure that the tablet is covered with a protective cover during treatment.

Protective covers help to keep blood, saliva, or dirt away from the surface of the tablet. Crosstex is one of the suppliers of protective covers under the name iBarrier (see www.crosstex.com). Protective sleeves from the manufacturer are included with CEREC AF/AI.

NOTICE
If a tablet is used, position it so that there is no risk of damage occurring, for example on a flat surface.
8.1.5 **CEREC Omnicam**

### CAUTION

If the CEREC Omnicam accidentally falls down, check to make sure that the camera window and coated sapphire glass are not damaged. If the CEREC Omnicam has been damaged, it must no longer be used on patients. The CEREC Omnicam must be recalibrated.

### NOTICE

Do not under any circumstances sterilize the CEREC Omnicam or the camera cable.

### NOTICE

The mirror sleeves cannot be sterilized in the autoclave.

### NOTICE

For markets where the RKI* guidelines are to be observed

The mirror sleeve is classified as a "semicritical medical device A" according to RKI guidelines and therefore does not have to be autoclavable.

*RKI=Robert Koch Institute, Berlin (Germany).

8.1.5.1 **General information**

The CEREC Omnicam is a very sensitive optical device and must therefore be handled with the utmost care. Protect the coated sapphire glass and the camera window against scratches and clean them with a lint-free cloth and ethanol (commercially available cleaning alcohol) if any haze is noted during the acquisition.

The following methods are available for cleaning the mirror sleeves:

- Wipe disinfection for the camera and mirror sleeve [→ 67]
- High-level disinfection of the mirror sleeve [→ 68]
- Hot air sterilization of the mirror sleeve [→ 73]
8.1.5.2 Components of the Omnicam

</tbody>
</table>

8.1.5.3 Removing the mirror sleeve

If required to remove the mirror sleeve do the following:

1. Press the mirror sleeve against the camera body.
2. Press detent A.

**NOTICE**

There is a risk of damaging the camera window or the coated sapphire glass if the mirror sleeve is not pushed straight toward the front.

➢ Push the mirror sleeve straight toward the front; do not tilt it.

3. Pull off the mirror sleeve.

8.1.5.4 Refitting the mirror sleeve

➢ Carefully refit the mirror sleeve until it locks in place.

**NOTICE**

There is a risk of damaging the camera window or the coated sapphire glass if the mirror sleeve is not pushed straight toward the front.

➢ The mirror sleeve must not come into contact with the camera window.

➢ Push the mirror sleeve straight toward the camera body; do not tilt it.

➢ Carefully refit the mirror sleeve until it locks in place.

8.1.5.5 Pre-cleaning of the mirror sleeve

Clean the CEREC Omnicam immediately after use as follows:
1. Carefully wipe the mirror sleeve while it is on the camera so that no dirt whatsoever can remain stuck and can harden on the surface of the mirror sleeve. Use an absorbent cotton-based gauze for this with water and neutral soap or a lint-free cloth that has been soaked in one of the cleaning agents listed under Cleaning agents and disinfectants.

2. Next dry the mirror sleeve using a lint-free cloth.

### 8.1.5.6 Wipe disinfection for the camera and mirror sleeve

**NOTICE**

Do not spray the CEREC Omnicam or immerse it in cleaning agents or disinfectants!

1. Carry out a preliminary cleaning process (see “Pre-cleaning of the mirror sleeve [→ 66]”).

2. Use a new absorbent cotton gauze which is moistened with one of the agents listed in the “Cleaning agents and disinfectants” section. First wipe the camera enclosure and then the mirror sleeve. The camera enclosure and mirror sleeve are disinfected through this step.

3. Next dry the mirror sleeve using a lint-free cloth.
8.1.5.7 High-level disinfection of the mirror sleeve

NOTICE

The hot air sterilization and high-level disinfection must not be combined.

The complete process for high-level disinfection (HLD) is as follows – assuming the CIDEX® OPA disinfectant is available in your country via your dealer:

A HLD set to support the HLD processes can be ordered from Dentsply Sirona with REF 66 05 120. This replaces the set with REF 63 46 907.

The processes for both HLD sets can be found in the document "CEREC camera – care, cleaning, disinfection and sterilization" available on our online portal for Technical Documentation (http://www.dentsplysirona.com/manuals).

1. Carry out a preliminary cleaning process (see "Pre-cleaning of the mirror sleeve [→ 66]").
2. Always use personal protective equipment when implementing the high-level disinfection if not before.
3. Remove the mirror sleeve from the CEREC Omnicam (see Removing the mirror sleeve [→ 66]).
4. Place the white protective cap on the camera head and place the camera in the camera storage unit.
5. Use the following disinfectant for the high-level disinfection: CIDEX® OPA.
6. Push the plug completely into the metal bracket.

7. Press the mirror sleeve onto the plug while holding the metal bracket firmly in place in order to ensure that no particle contamination or fluids penetrate the inside of the mirror sleeve. The plug provides a waterproof seal for the mirror sleeve when attached correctly.

**CAUTION**
Observe the safety instructions from the disinfectant manufacturer.

8. Carefully fill the HLD container up to the marking (B). You can use a funnel to pour in the fluid (A). Do not spill any disinfectant. Observe the safety instructions from the disinfectant manufacturer when cleaning if you do spill any disinfectant.
9. Insert the metal bracket with the metal sleeve.

10. Place the cover on the container and leave the mirror sleeve in the disinfectant for at least 12 minutes (CIDEX® OPA). The mirror sleeve will not be damaged if it remains in the disinfectant for longer than the required time, but removing it shortly after the required time is recommended.
11. Remove the cover and take the bracket with the mirror sleeve out of the container.

12. Carefully rinse the mirror sleeve with water from the mains while holding it with the bracket.

13. Remove the bracket from the mirror sleeve carefully and slowly by pushing the bracket downwards. Ensure that the mirror sleeve is pointing upwards so that no fluids are able to penetrate into the interior of the mirror sleeve.

14. Remove the plug from the bracket.

15. Dry the plug.

16. Dispose of the fluid and store the bracket in the empty container if the HLD set is not used for more than one week.
17. Dry the entire outer surface of the mirror sleeve as well as the inner section using a soft lint-free cloth. Ensure that no fluid is able to penetrate the inside of the mirror sleeve.

18. Store the mirror sleeve in such a way that it is protected from contamination until the next use.

19. Remove the white protective cap from the camera head before use.

20. Carefully re-attach the mirror sleeve and allow it to lock in place (see Refitting the mirror sleeve [→ 66]).
8.1.5.8 Hot air sterilization of the mirror sleeve

**NOTICE**

Hot air sterilization and high-level disinfection must not be combined.

The process for hot air sterilization is as follows:

1. Carry out a preliminary cleaning process (see "Pre-cleaning of the mirror sleeve [→ 66]").
2. Remove the mirror sleeve from the CEREC Omnicam (see "Removing the mirror sleeve [→ 66]") section.
3. The mirror sleeve can be sterilized using hot air (180 °C, 30 min). Please ask your dealer for deals on hot air sterilizers. Place the mirror sleeves in the hot air sterilizer and follow the manufacturer's instructions.
4. Store the mirror sleeve in such a way that it is protected from contamination until the next use.
5. Carefully re-attach the mirror sleeve and allow it to lock in place (see "Refitting the mirror sleeve [→ 66]" section).
8.2 Calibrating CEREC Omnicam

The measurement procedure used by the system requires the use of a calibrated CEREC Omnicam. The CEREC Omnicam is factory-calibrated. Then calibrate the CEREC Omnicam after every reinstallation and after every transport. The calibration set supplied with the CEREC Omnicam is available for the calibration process.

In order to achieve optimum results, the CEREC Omnicam must be allowed to warm up for 15-20 minutes before calibration.

Recalibrate the CEREC Omnicam in the following cases:
- following transport (shaking stress) or during first commissioning,
- after storage in unheated or un-air-conditioned rooms (temperature differences exceeding 30°C)
- with temperature differences of over 15°C between the last calibration and operation
- In general, carrying out a calibration is the correct process in the event of errors in the acquisition process (such as poor image quality or the lack of a 3D preview). In many cases, the errors can be corrected in doing so.
- As the system may be exposed to vibration loads without knowledge of this, it should be calibrated once a month.

Starting calibration
1. In the software, navigate to the system menu and click on the "Configuration" button.
2. Click on the "Devices" button.
3. Click on the "Omnicam" button.
4. Click on the "Calibrate" button.
   - The camera view is displayed in one window.
5. Enter the 8-digit Sirona ID. You can find this ID on the sticker on the calibration set.

Calibrate the camera
1. Remove the protective cap from the calibration set.
2. Mount the calibration set on the tip of the camera until it locks into place.
3. Secure the CEREC Omnicam in the calibration set using one hand. Ensure that the external calibration set screw is fully screwed in a clockwise motion until it gently locks into place.
4. Click on the "OK" button.
   - The measuring process starts.
   - The software prompts you to proceed to the next latching.
5. Turn the screw counter-clockwise until you reach the next latching point.

6. Click on the "OK" button. In doing so, ensure that the CEREC Omnicam does not move.
   - The software confirms the calibration process.
   - The software prompts you to proceed to the next latching.

7. Execute steps 5 and 6 a total of 11 times.
   - The software provides status updates on the calibration and informs you once the procedure is complete.
   - You will be prompted to measure the position of the exit window.
Measuring the position of the exit window

1. Mount the bottom side of the calibration set to the tip of the camera.
2. Click on the “OK” button.
   - The calibration process is continued.
   - Once the calibration is complete, a message is displayed indicating this.
3. Confirm the message by clicking the “OK” button.
   - The CEREC Omnicam is calibrated.

Error message during calibration

The software indicates if an error occurs during calibration. If the calibration process resulted in errors, restart the process.

End calibration

✓ The software indicates that the calibration was completed successfully.
➢ Click on the “OK” button.
   - The CEREC Omnicam is calibrated.
8.3 Color calibration

General information

NOTICE
Faulty color analysis
The color analysis can be negatively impacted due to strong light incidence and it can lead to varying results.
➢ Set the model CEREC Omnicam up so that it is not located directly in the beam path of an extreme light source (e.g., the treatment light) and not exposed to direct sunlight.

A color-calibrated Omnicam must be used for the color analysis.

The color analysis can only be carried out with a CEREC Omnicam from a particular serial number. In order to test the CEREC Omnicam, use the Omnicam test tool on my.cerec.com -> CEREC SW 4.5 - > Shade Detection.
You can find the serial number of the Omnicam on the upper side on the optics tube (see arrow E in the figure below).
This is only relevant for first generation cameras. For new systems, the serial number of the Omnicam does not need to be determined.

1. Press the mirror sleeve (B) against the camera body.
2. Press detent (A).

NOTICE
Risk of damaging the camera window (D) or the coated sapphire glass (C).
➢ Push the mirror sleeve straight toward the front; do not tilt it.
3. Pull off the mirror sleeve.

In order to achieve optimum results, the CEREC Omnicam must be allowed to warm up for 20 minutes before calibration. The CEREC Omnicam must be color calibrated every two weeks in order to carry out a reliable color analysis. You will achieve the best results if the CEREC Omnicam is color calibrated immediately before scanning a new case.
Carry out a color calibration also after changing a mirror sleeve. Heavily scratched mirror sleeves may not be used for a color analysis.

Storing a color-calibration set

The color-calibration set must be stored in its packaging in a dry place which is protected from light. It must be used with a disinfected Omnicam as the color-calibration set must itself not be disinfected. If dust accumulates on the inside of the color-calibration set, it must be carefully removed using compressed air.

Switch on the color analysis

1. In the software, navigate to the system menu and click on the "Configuration" button.
2. Click on the "Devices" button.
3. Click on the "Omnicam" button.
4. Select the "Shade Detection" option.
   - You can choose between various color systems ("Shade Guide Selection").
   - You can decide whether you would like to be notified in 14 days when the color calibration is needed again.
   - If color recognition is not possible with your camera, a corresponding notice will appear. A color calibration is also not available in this case.
5. Confirm the changes below with "Ok".
6. Click the "Color Calibration" button and carry out the color calibration.

Color-calibrating the camera

1. Make sure that the CEREC Omnicam is clean, disinfected and dry.
2. Remove the color-calibration set from the packaging.
3. Use the CEREC Omnicam to scan the QR code on the underside of your color-calibration set. In order to do this, you must hold the CEREC Omnicam still in front of the QR code so that it is completely visible in the picture. If the QR code appears to be shiny, hold the camera at more of an oblique angle in order to avoid any glaring light and to make it easier to scan the codes. If the QR code is recognized, the next "Please mount color calibration set" step appears.
   This step of the QR code scan is skipped during the subsequent color calibration and the serial number of the color-calibration set is thus displayed. If this does not match the serial number printed on your color-calibration set, click on the "Rescan QR Code" button and scan the new QR code.
4. Mount the color-calibration set on the tip of the camera until it locks into place.
5. Click on the "Ok" button.
   - The measuring process starts. Do not move the CEREC Omnicam or the color-calibration set during this time.
   - The software provides status updates on the calibration and informs you once the procedure is complete.
Ending the color calibration

✓ The software indicates that the color calibration was completed successfully.
1. Click on the “Ok” button.
   ✐ The CEREC Omnicam is now color calibrated.
2. Remove the color-calibration set from the camera and place it back in the packaging.

Error message during color calibration

The software indicates if an error occurs during color calibration. If the color calibration contained an error, ensure the following:

● The color-calibration set is free of dust
● The color-calibration set was mounted correctly
● The CEREC Omnicam exit window is clean
> Then restart the color calibration.

Do not continue using a damaged color-calibration set; instead, contact your distributor to purchase a new one.
Replacing the color calibration set

Please note that the color calibration set

- can only be used with CEREC SW software ≥ 4.5 or Sirona Connect SW ≥ 4.5 or CEREC Premium SW ≥ 4.5.
- can only be kept for use for a maximum of 2 years. You can find the expiry date at the bottom of the color calibration set container. Previous storage may mean that the period for use has been reduced to less than 2 years.
- can only be used for one year after the container has been opened. Write the date that the container was opened on the container after "Opened on __________" using a waterproof pen and do not use after one year.

The color calibration set may no longer be used once either of the two periods has expired.

The software notifies you that the color calibration set needs to be replaced with a new set before the color calibration expires.

Once the color calibration set has expired the software notifies you that a color analysis can only be carried out based on old calibration data.

Please contact your dealer for replacements for the color calibration set.
9 Disposal

In accordance with Directive 2012/19/EU and national disposal regulations regarding old electrical and electronic devices, please be advised that such items must be disposed of in a special way within the European Union (EU). These regulations require the environmentally friendly recycling/disposal of old electrical and electronic devices. Such items must not be disposed of as domestic refuse. This has been expressed using the icon of the “crossed out trash can”.

Disposal procedure

We feel responsible for our products from the first idea to their disposal. For this reason, we give you an option to return our old electronic and electrical devices.

If you wish to dispose of your devices, please proceed as follows:

In Germany

To initiate return of the electrical device, please send a disposal request to enretec GmbH. You have the following options here:

- Use the “Returning an electrical device” button under the “eom” menu item on the enretec GmbH homepage (www.enretec.de).
- Alternatively, you can also contact enretec GmbH directly.

enretec GmbH
Kanalstraße 17
16727 Velten
Tel.: +49 3304 3919-500
E-mail: eom@enretec.de

In accordance with the national disposal regulations regarding old electrical and electronic devices (ElektroG), as the manufacturer, we assume the costs for disposing of the electrical and electronic devices in question. Disassembly, transport and packaging costs shall be borne by the owner/operator.

Prior to disassembly/disposal of the product, it must be fully prepared (cleaned/disinfected/sterilized).

If your unit is not permanently installed, it will be collected from the practice. If it is permanently installed, it will be picked up curbside at your address by appointment.

Other countries

For country-specific information on disposal, contact your local dental dealers.
10 PC Diagnostic Tool

10.1 Start diagnostic tool

<table>
<thead>
<tr>
<th>Test</th>
<th>Suitable for</th>
</tr>
</thead>
<tbody>
<tr>
<td>Customer Diagnostics</td>
<td>Suitable for the user, in order to check the PC components.</td>
</tr>
<tr>
<td>Technician Diagnostics</td>
<td>Suitable for the technician, in order to check the PC components.</td>
</tr>
<tr>
<td>Sirona Windows Diagnostics</td>
<td>Windows Stress Test, in order to test the PC at permanent load.</td>
</tr>
</tbody>
</table>

**Tip:** If one of the following steps does not work, further steps can be found in the Service Manual.

1. The PC is switched off.
2. Switch on the PC.
3. Repeatedly press the "F11" or "F8" button (in V2.2.1 - V2.2.3) until the PC switches to the boot menu.
4. Insert the diagnostics tool CD into the drive.
5. Select the "P3: TSSTcorp CDDVDW ..." menu option.
6. Confirm your selection with the "Return" key on the keyboard.
7. The diagnostics tool starts and a selection menu appears.

**Tip:** After one minute, if none of the arrow keys have been pressed, the "Customer Diagnostics" test starts automatically.

6. Select the test using the arrow keys.
7. Confirm your selection with the "Return" key on the keyboard.
   * The test starts.

10.2 Test procedure

10.2.1 Customer Diagnostics
1. Using the information in the system configuration, check whether the system corresponds to the default settings. You can scroll up and down using the arrow keys.
   Tip: The test starts automatically after 3 minutes if you do not press an arrow key.

2. Press the "Esc" key on the keyboard.

   - The test starts. The entire test run takes approx. 30 minutes.
   - The result, i.e. "Pass" or "Fail", appears at the end of the test (see sections entitled "Test result: Pass" or "Test result: Fail").

3. On completion of the test, press any key to go on to the test dialog.
   Tip: You can scroll to the individual test steps using the arrow keys. The corresponding result is shown in front of each test step.

4. To end the test, restart the PC.

Test result: Pass

No errors were found on the PC-specific hardware. Replacing the PC component or the PC is not advisable.

1. Perform the separate test for the supply board.
2. Perform an image restore with the restore set for troubleshooting.
3. Check the service instructions for other possible fault sources.

Test result: Fail

An error was found on the PC-specific hardware. Replacing the PC component or the PC may be required.
An image restore is not advisable.
1. Check to find out which components did not pass the test.
2. Write down the defective test number and, if available, the error code and inform the technician of this as soon as possible.
3. Carry out the appropriate steps in the chapter entitled Troubleshooting [→ 88].

End "Customer Diagnostics" test
1. Remove the PC diagnostic tool CD from the drive.
2. Switch the PC off by briefly pressing the on/off key.

10.2.2 Technician Diagnostics

✓ You have started the "Technician Diagnostics" test and the system configuration is displayed.
1. Using the information in the system configuration, check whether the system corresponds to the default settings. You can scroll up and down using the arrow keys.  
   **Tip:** The test starts automatically after 3 minutes if you do not press an arrow key.

2. Press the "Esc" key on the keyboard.

The test starts. The entire test run takes approx. 30 minutes.

The result, i.e. "Pass" or "Fail", appears at the end of the test (see sections entitled "Test result: Pass" or "Test result: Fail").

3. On completion of the test, press any key to go on to the test dialog.  
   **Tip:** You can scroll to the individual test steps using the arrow keys.  
   The corresponding result is shown in front of each test step.

4. To end the test, restart the PC.

**Test result: Pass**

No errors were found on the PC-specific hardware. Replacing the PC component or the PC is not advisable.

1. Perform the separate test for the supply board.
2. Perform an image restore with the restore set for troubleshooting.
3. Check the service instructions for other possible fault sources.
Test result: Fail
An error was found on the PC-specific hardware. Replacing the PC component or the PC may be required.
An image restore is not advisable.
1. Check to find out which components did not pass the test.
2. Carry out the appropriate steps in the chapter entitled Troubleshooting [→ 88].
3. Note the number of the failed test and the error code if available.
   Attach this information to the returned PC when replacing a PC.

End "Technician Diagnostics" test
1. Remove the PC diagnostic tool CD from the drive.
2. Switch the PC off by briefly pressing the on/off key.

10.2.3 Sirona Windows Diagnostics

General

The "Sirona Windows Diagnostics" test loads the PC-specific components simultaneously over a long period of time. This period of time is determined by the user.

As a result of this load
- the temperature in the PC is significantly increased compared with normal operation.
  A temperature malfunction or any existing faults are thereby detected.
- Thanks to the temporal, unlimited test phase, sporadically occurring faults are more likely to be detected.

Tip: Only conduct the test if at least one of the "Customer Diagnostics" or "Technician Diagnostics" tests has been completed with a "pass" and without errors.
Performing the test

Tip: Allow the "Sirona Windows Diagnostics" test to run for at least 1 hour. For optimum results, allow the test to run overnight.

✔ You have started the "Sirona Windows Diagnostics" test and Windows starts in the test environment. The "Sirona Windows Diagnostics" test starts automatically.

➢ Check the result in the "Windows Stress Test" window.

Tip: You may have to rearrange the windows to be able to see the "Windows Stress Test" window.

Test result: Pass

No errors were found on the PC-specific hardware. Replacing the PC component or the PC is not advisable.

Test result: Fail

An error was found on the PC-specific hardware. Replacing the PC component or the PC may be required. An image restore is not advisable.

1. Check the "Windows Stress Test" window for those components that did not pass the test.

2. Carry out the appropriate steps in the chapter entitled Troubleshooting [→ 88].

Ending the "Sirona Windows Diagnostics" test

➢ Click the "Stop" button.

✔ The individual test windows close.

✔ The PC is switched off.
10.3 Troubleshooting

The recommended procedure is as follows. If troubleshooting and/or a component replacement cannot eliminate the fault, replace the PC.

In this case, specify which test was defective when returning the defective PC.
## 10.3.1 Customer Diagnostics & Technician Diagnostics
