1 Function of the software

"Sirona Server" is a network-based software solution designed to increase connectivity of Sirona products, for example CEREC intraoral scanners, in the dental practice. The individual modules interact to help transmit patient and case data securely in the network.

"Sirona Server" is a central component which acts as a communication hub. "Sirona Server" includes security services as well as the "Sirona Registry Server", which administers a list of devices and services available in the network. "Sirona Launcher" is installed on Sirona PCs in order to allow communication partners to remotely launch software.
2 System requirements

The following operating systems are supported:

- for single-user installation: Windows Vista SP2 or higher Windows version
- for server installation: Windows Server 2008 SP2 or higher Windows Server version

Further software requirements:

- .NET 4.5.1 or higher
3 SIRONA Registry Server

## 3.1 Installing SIRONA Registry Server

**NOTICE**

Installation only with administrator rights

You must have administrator rights on the PC on which you want to install the software!

✔ The device is powered up and all programs are terminated.

1. Insert the storage medium in the drive.
2. Run the "Sirona Registry Server Installer.exe" file from the root directory of the storage medium.
   - The installation wizard opens.
3. Click on the "Install" button.
   - The installation wizard checks if all corresponding programs are installed. If a corresponding program is missing, it is installed automatically.
   - Hereafter the license agreement is displayed.
4. Read through the license agreement carefully.
5. If you accept the license agreement, activate the "I accept the terms in the license agreement" option button and click the "Install" button.
   - The installation routine continues.
6. To launch Sirona Registry Server immediately after the installation, activate the "Launch Sirona Server" option button.
7. Click on the "Finish" button.
8. Click the "Close" button once installation is complete.
   - Sirona Registry Server is displayed in the task bar.
   - Sirona Registry Server is installed.

## 3.2 Necessary steps following the installation

### Checking netsh entry

1. Click "start" in the task bar and enter the command "cmd".
2. Confirm with the "Enter" key.
   - DOS command shell opens.
3. Enter the command "netsh http show urlacl" and confirm with the "Enter" key.
4. The following message must appear:
### 3.3 Uninstalling SIRONA Registry Server

1. Select "start" > "Control panel" > "Programs" > "Uninstall a program".
2. Double-click "Sirona Registry Server".
3. In the appearing dialog, click on the "Uninstall" button.
   - The software is uninstalled.
