Dear Customer,

Thank you for your purchase of this CEREC MC/MC X® unit from Dentsply Sirona.

This device enables you to produce dental restorations, e.g. from ceramic material with a natural appearance (CEramic REConestruction).

Improper use and handling can create hazards and cause damage. Please therefore read and follow these operating instructions carefully. Always keep them within easy reach.

Also pay attention to the safety instructions to prevent personal injury and material damage.

Your
CEREC MC/MC X team,

1.1 Contact data

Customer Service Center

In the event of technical queries, please use our online contact form at the following address:
http://srvcontact.sirona.com

Manufacturer’s address

Sirona Dental Systems GmbH
Fabrikstrasse 31
64625 Bensheim
Germany

Tel.: +49 (0) 6251/16-0
Fax: +49 (0) 6251/16-2591
e-Mail: contact@dentsplysirona.com
www.dentsplysirona.com
2 General data

Please read this document completely and follow the instructions exactly. You should always keep it within reach.

Original language of the present document: German.

2.1 Identification of the danger levels

To prevent personal injury and material damage, please observe the warning and safety information provided in these operating instructions. Such information is highlighted as follows:

| **DANGER** | An imminent danger that could result in serious bodily injury or death. |
| **WARNING** | A possibly dangerous situation that could result in serious bodily injury or death. |
| **CAUTION** | A possibly dangerous situation that could result in slight bodily injury. |
| **NOTE** | A possibly harmful situation which could lead to damage of the product or an object in its environment. |
| **IMPORTANT** | Application instructions and other important information. |

**Tip:** Information for simplifying work.
2.2 Formats and symbols used

The formats and symbols used in this document have the following meaning:

- ✓ Prerequisite
- 1. First action step
- 2. Second action step
- or
- ➢ Alternative action
- ➢ Result
- ➢ Individual action step

Requests you to do something.

See “Formats and symbols used [→ 7]”

Identifies a reference to another text passage and specifies its page number.

- • List

Designates a list.

“Command / menu item”

Indicates commands / menu items or quotations.

2.3 Note PC / Acquisition Unit

When a PC is described in this document, this refers to a PC for the acquisition unit (if present). The PC is represented symbolically.

Please observe our recommendations for PC configuration (see System requirements [→ 66]).
3 General description

3.1 Certification

CE mark

CAUTION

CE mark for connected products

Further products which are connected to this unit must also bear the CE mark. These products must be tested according to the applicable standards.

Examples of CE mark for connected products:
- EN 60601-1:2006 based on IEC 60601-1:2005
- EN 60950-1:2006 based on IEC 60950-1:2005
- UL 60950 second edition 2010

RoHS compliance

This symbol indicates that this product does not contain any toxic or hazardous substances or components above the maximum concentration value set out in the Chinese standard SJ / T 11364-2014, and can be recycled following disposal and should not be carelessly discarded.

Compliance statement

Changes or modifications not expressly approved by the manufacturer could void the user’s authority to operate the equipment.

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.
3.2 Indications for use

The Sirona Dental CAD/CAM System is intended for use in partially or fully edentulous mandibles and maxillae in support of single or multiple-unit cement retained restorations. For the BH 3.0 S, SSO 3.5 L and SBL 3.3 L titanium bases, the indication is restricted to the replacement of single lateral incisors in the maxilla and lateral and central incisors in the mandible. The system consists of three major parts: TiBase, inCoris mesostructure, and CAD/CAM software. Specifically, the inCoris mesostructure and TiBase components make up a two-piece abutment which is used in conjunction with endosseous dental implants to restore the function and aesthetics in the oral cavity. The inCoris mesostructure may also be used in conjunction with the Camlog Titanium base CAD/CAM (types K2244.X)(XX) (K083496) in the Camlog Implant System. The CAD/CAM software is intended to design and fabricate the inCoris mesostructure. The inCoris mesostructure and TiBase two-piece abutment is compatible with the following implant systems:

### General description

#### 3.2 Indications for use

**WARNING**

Small diameter implants and angled abutments are not recommended for the posterior region.

**WARNING**

The TiBase has not been evaluated for safety and compatibility in the MR environment. It has not been tested for heating, migration, or image artifact in the MR environment. The safety of TiBase in the MR environment is unknown. Scanning a patient who has this device may result in patient injury.

**CAUTION**

Federal Law (USA) restricts the sale of this device to or on the order of a physician, dentist, or licensed practitioner.

CEREC Guides are intended to support the dentist or oral surgeon when drilling for placement of dental implants. CEREC Guides are intended to be designed and fabricated using the Sirona Dental CAD/CAM System’s CEREC Chairside software and CAM equipment, Galileos Implant dental implant planning software, and Calibra Universal Self-Adhesive Resin Cement.

3.3 Further use of Sirona Dental CAD/CAM system

The Sirona Dental CAD/CAM System is also:

- an optical impression system for computer assisted design and manufacturing (CAD/CAM) according to 21 CFR 872.3661. The system records the topographical characteristics of teeth, dental impressions, or stone models for use in the computer-assisted design and manufacturing of dental restorative prosthetic devices.

- an endosseous dental implant accessory according to 21 CFR 872.3980. The system is used to produce a part that the user can manually incorporate together with other 3rd party components into a dental surgery guide, a temporary accessory used with endosseous dental implants with tissue contact for less than 1 hour (exempt).

Such devices are exempt from the premarket notification procedures.
4 Safety

4.1 Basic safety information

4.1.1 Prerequisites

**NOTE**

**Important information on building installation**

The building installation must be performed by a qualified expert in compliance with the national regulations. DIN VDE 0100-710 applies in Germany.

**NOTE**

**Restrictions regarding installation site**

The system is not intended for operation in areas subject to explosion hazards.

**NOTE**

**Do not damage the unit!**

The unit can be damaged if opened improperly.

It is expressly prohibited to open the unit with tools!

4.1.2 Maintenance and repair

As manufacturers of dental instruments and laboratory equipment, we can assume responsibility for the safety properties of the unit only if the following points are observed:

- The maintenance and repair of this unit may be performed only by Dentsply Sirona or by agencies authorized by Dentsply Sirona.
- Components which have failed and influence the safety of the unit must be replaced with original (OEM) spare parts.
- Only original cables may be used, so that EMC requirements are met.

Please request a certificate whenever you have such work performed. It should include:

- The type and scope of work.
- Any changes made in the rated parameters or working range.
- Date, name of company and signature.

4.1.3 Modifications to the product

Modifications to this product which may affect the safety of the operator, patients or third parties are prohibited by law!
4.1.4 Accessories

In order to ensure product safety, this device may be operated only with original Dentsply Sirona accessories or third-party accessories expressly approved by Dentsply Sirona. In particular, only the power cable also supplied or the corresponding original spare part may be used with the unit. The user is responsible for any damage resulting from the use of non-approved accessories.

4.2 Opening the processing chamber door during the machining process

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instruments that continue to run</td>
</tr>
<tr>
<td>When the processing chamber door is opened during the machining process, the instruments could continue to run for a short time.</td>
</tr>
<tr>
<td>➢ Be careful not to touch the instruments with your hand or any other object during this time.</td>
</tr>
<tr>
<td>➢ Avoid opening the processing chamber door while the milling and grinding unit is in operation.</td>
</tr>
<tr>
<td>➢ Before you open the processing chamber door, end any actions that are running by pressing the &quot;Stop&quot; button on the milling and grinding unit or in the application software.</td>
</tr>
</tbody>
</table>

4.3 Wireless phone interference with equipment

The use of mobile wireless phones in practice or hospital environments must be prohibited to ensure safe operation of the unit.

4.4 Only for the Republic of Belarus

NOTE! Personnel work with the Device without using personal hearing protection according to GOST 12.4.051-87 (table 2: reusable anti-noise inserts and anti-noise headphones) is not allowed.
4.5 Disturbance of data transmission

Note on wireless communication

Data communication between the acquisition unit and the CEREC MC/MC X milling and grinding unit should preferably be established via the wireless interface CEREC Radio Device or WLAN.

As for all wireless connections (e.g. cell phones), heavy utilization of the available radio channels or shielding caused by building installations (e.g. metal-shielded X-ray enclosures) may impair the quality of the connection. This may become noticeable through a reduction in range and/or a slower data transmission rate. In extreme cases, it will be impossible to establish a wireless connection at all.

Dentsply Sirona has selected the best possible configuration for data communication via the wireless interface (CEREC Radio Device) or WLAN, which generally ensures perfect functioning of this connection. However, in individual cases unrestricted wireless data communication may be impossible for the reasons mentioned above and/or due to local circumstances. In such cases, a cable LAN connection should be selected to ensure uninterrupted operation. If the only LAN interface on the rear of the CEREC AC is occupied by another plug, remove this wireless interface connection, and instead connect the LAN cable with the CEREC MC/MC X milling and grinding unit.
5 Installation and startup

5.1 Transport and unpacking

All products from Dentsply Sirona are carefully checked prior to shipment. Please perform an incoming inspection immediately after delivery.

1. Check the delivery note to ensure that the consignment is complete.
2. Check whether the product shows any visible signs of damage.

**NOTE**

**Damage during transport**

If the product was damaged during transport, please contact your carrying agent.

If return shipment is required, please use the original packaging for shipment.

The unit must be drained prior to shipment (if it has been operated).

Removing water from the unit

**Transport without packaging**

**CAUTION**

**Damage to the unit or risk of injury during transport without packaging**

There is a danger of the unit falling down if it is grasped by its plastic housing.

➢ The unit should always be carried by two persons.
➢ Do not grasp the unit by its plastic housing.
➢ Always grasp the unit by its chassis next to its feet.

5.2 Disposal of packaging materials

The packaging must be disposed of in compliance with the relevant national regulations. Please observe the regulations applicable in your country.
5.3 Installation site

⚠️ CAUTION

Install out of the reach of patients!
Do not install or operate the milling and grinding unit in the vicinity of the patient (place it at least 1.5 m away from the patient).

The milling and grinding unit requires a level Approx. footprint: 700 x 420 mm (W x D). The height of the milling and grinding unit is:

- with the processing chamber door closed: 425mm
- with the processing chamber door, open: 570mm

Install the milling and grinding unit in such a way that it is not difficult to operate the main switch.

Make sure that the ventilation slots underneath and at the back of the unit remain unobstructed. The distance between the back of the unit and the wall must at least be 10 cm.

Note that the unit weighs 43 kg!

The unit must not be installed at sites with a high level of humidity or dust!

NOTE

Installation in a cabinet
If the unit is installed in a cabinet, you must provide for adequate heat exchange.

The ambient temperature surrounding the unit must be between 5°C and 40°C.
5.4 Commissioning

**NOTE**

Important information on initial startup
Observe the software installation instructions!

* All-in-One
5.4.3 Display description

These operating instructions describe how to operate the unit by executing and confirming commands via your PC.

You can also confirm commands such as "Start", "Stop", "Cancel" or "OK" directly on the display of your milling and grinding unit.

Possible commands are then shown above the corresponding button on the display. In the example shown, button 1, (A) would confirm the command "Start" and button 4, (D) would confirm the command "Stop".

<table>
<thead>
<tr>
<th>Display A</th>
<th>Button 1</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display B</td>
<td>Button 2</td>
<td>Display</td>

<td></td>
</tr>
</tbody>
</table>

5.4.4 Illumination of the processing chamber

The lighting of the processing chamber depends on the machining operation involved:

<table>
<thead>
<tr>
<th>Machining operation</th>
<th>Lighting color</th>
</tr>
</thead>
<tbody>
<tr>
<td>Milling and grinding</td>
<td>White</td>
</tr>
<tr>
<td>Operation completed</td>
<td>Green</td>
</tr>
<tr>
<td>Error or &quot;Stop&quot; button pressed</td>
<td>Red</td>
</tr>
</tbody>
</table>
5.4.5 Inserting the processing chamber screen and upper screen

**NOTE**

**Risk of blockage in the cooling circuit**

If chips enter into the cooling circuit of the machine, there is a risk that the cooling circuit will become blocked.

➢ The processing chamber screen is suitable for all restoration and material types. It is absolutely essential that no chips enter into the cooling circuit.

---

**Inserting the upper screen**

The upper screen enables simpler cleaning of processing chambers when milling CEREC Guide 2 drilling templates. It can also be used with other materials, but is particularly helpful when it comes to removing material waste, which gathers during each milling process of CEREC Guide 2 on the floor of the processing chamber.

1. Position the upper screen on the existing processing chamber screen on the floor of the chamber. If needed, you can easily remove and clean the upper screen. It is essential that the upper screen is emptied and washed following each milled drilling template.

2. Check the water level in the water tank following each milled drilling template, as water is absorbed in the material waste.

---

5.4.6 Connecting the bar code reader

The bar code reader is optional for the CEREC MC/MC X unit.

**Connecting the bar code reader**

➢ Plug the bar code reader into the serial interface to the rear of the milling and grinding unit and secure with screws.
5.4.7 **Installation**

5.4.7.1 **Connecting to the PC via LAN**

An Ethernet connection is located to the rear of the unit, which can be used to connect the PC to the milling and grinding unit. Use a network cable to do this (LAN connection).

*Using a network cable*

Connect the PC to the LAN connection of the unit.

If problems arise when connecting via a network cable, please read the separate instructions "Operating the MC XL via LAN".

5.4.7.2 **Connecting the unit to the power supply**

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Grounded power outlet</strong></td>
</tr>
<tr>
<td>The unit must be connected to a grounded power outlet.</td>
</tr>
</tbody>
</table>

➢ Connect the unit to the power supply using the supplied power cable.
5.4.7.3 Installing the unit

You must connect the unit to the PC before putting it into operation. This is described in the section entitled "Connecting to the PC via LAN" [→ 24] or "Connecting to the PC via WLAN (option)" [→ 29].

Searching for unit automatically

The unit is connected to the PC via a LAN cable or via WLAN.
1. Click the "Configuration" button in the system menu.
2. Click on the "Devices" button.
3. Click on the "Scan for New Devices" button.
   - All units connected to the PC are recognized. In the case of new units, you will be prompted to enter a name.
4. Enter a name for the new unit.

Searching for unit manually

The unit is connected to the PC via a LAN cable or via WLAN.
1. Click the "Configuration" button in the system menu.
2. Click on the "Devices" button.
3. Click on the "Add Device (Manual)" button.
4. Set the network.
5. Enter the network address which appears on the "IP address:" display once the milling and grinding unit has been switched on.
6. Click on the "Ok" button.
   - The software attempts to contact the device.
If the connection fails, check the connection. If necessary, ask a qualified technician.

Unit removal

✓ If you no longer require a unit (e.g. a unit is replaced), you can remove it.
✓ The unit is operation.
1. Click the "Configuration" button in the system menu.
2. Click on the "Devices" button.
3. Click on the unit that you wish to uninstall.
4. Click on the "Delete Device" button.
   - You will be asked if you would like to remove the unit.
5. Click on the "YES" button.
   - The device is removed.
5.4.7.4 Connecting the suction device (optional)

5.4.7.4.1 Connecting the suction tube

1. Connect one end of the suction tube to the available connection point on the suction device (A).
2. Connect the other end of the tube to the rear side of the milling and grinding unit (B).

Notes on the suction tube:
The suction tube is supplied at a length of approx. 2.0 m (CEREC MC/MC X/MC XL Premium Package). When connecting the suction device to the unit, please ensure that no sharp bends occur over the full length of the suction tube.

Reduce the length of the tube according to your requirements and your installation location. Note that suction power drops along the length of the tube. You obtain decent suction power if the suction device is placed immediately below the machine and you have a tube length of 1.2 m or less.
5.4.7.4.2 Connecting the power cord

**NOTE**

Grounded power outlet
The unit must be connected to a grounded power outlet.

1. Insert the power cable into the relevant socket on the suction system.
2. Plug the other end into an appropriate power socket with a protective ground terminal.

**Note on the power cable:**

The suction system must only be operated with a power cable with a plug system designed for the relevant country.

Check the voltage specification on the rating plate. The system must conform to the country-specific supply voltage.

5.4.7.4.3 Connecting the interface cable (for automatic mode)

1. Plug the 15-pole connector into the socket (A) of the processing machine.

2. Plug the 9-pole connector into the socket (B) of the suction device.
5.4.7.4.4 **Automatic mode**

- The interface cable is connected.
- **Set the on/off switch to the position Auto.**

**Note on the automatic mode:**

The processing machine monitors the correct socket (interface cable and suction tube) and the operation of the suction system during the running processes.

5.4.7.4.5 **Setting the suction power**

Use the control dial (A) to set the suction power.

- **Recommendation:** Set the suction power to the minimum (min). To increase the service life of the filter bags, you can increase the suction power to the maximum suction power (max).

**NOTE**

We recommended replacing the filter bag for the CEREC suction device after approx. 120 restoration units. This number may differ depending on the amount of zirconium oxide materials milled and suctioned.
5.4.7.5 Connecting to the PC via WLAN (option)

Making the connection

Connect access point

➢ Connect the LAN port A of the milling and grinding unit and the access point, using the network cable (10m, Order No.: 61 51 521).

The access point is pre-configured at the factory for this application.

Positioning the access point

1. As a test, place the access point near the milling and grinding unit at head level or higher.

2. Perform a communication test as described in the separate instructions (see "Operating MC XL via WLAN in infrastructure mode", chapter "Final work, analyzing connection quality"). If applicable, follow the instructions on changing channels.

3. After you have found the optimum setting, take the acquisition unit and place it in the position in which it will be operated that is farthest away from the access point.

4. From this position, repeat the communication test you conducted earlier. If the results are satisfactory, leave the access point permanently in this position.

5. If the results are not satisfactory, position the access point outside of the room in which the milling and grinding unit is located and repeat the communication test.

If the connection quality is still not adequate, WLAN communication cannot be easily achieved under the local conditions. In this case, ask your network administrator for assistance.

NOTE
LAN connection

Operation via a cable LAN connection is possible at any time.
5.4.7.6 **Operating several milling and grinding units over one access point**

To operate several MC/MC X or MC XL milling and grinding units over one access point, you need the following additional components:

- 1x LAN switch (e.g. Netgear ProSave 5 Port Gigabit Switch, Model GS 105)
- 1x LAN network cable (10m, Sirona Order No.: 61 51 521).

**Diagram of LAN switch, connection example with 2 milling and grinding units**

1. Connect the LAN port A of the milling and grinding units with the LAN switch using the included 10m LAN network cable.
2. Connect the access point with the LAN switch using the additional 10 m LAN network cable.
3. Now, all milling and grinding units connected to the LAN switch can be operated via WLAN.

5.4.7.7 **Connecting to the PC via the wireless interface (optional)**

The CEREC acquisition unit has one of the following wireless modules installed:

- Höft & Wessel HW 8614/F2
  - Installation kit: 62 79 694
  - Retrofit kit: 62 79 702

or

- CEREC Radio Device
  - Installation kit: 65 42 521
  - Retrofit kit: 65 43 073

**IMPORTANT**

Acquisition units and milling and grinding units can only work with one wireless module system or the other. This means that any additional acquisition or milling and grinding units that are acquired by existing customers, which need to be connected wirelessly to existing systems, will require the existing systems to be retrofitted in order to work with the new CEREC Radio Device.
5.4.7.7.1 Höft & Wessel HW 8614/F2

1. Connect the HW 8614/F2 wireless module to the LAN port of the milling and grinding unit using the LAN crossover cable (1 m).

2. Connect the plug-in power supply included in the scope of delivery with the wireless module HW 8614/F2 and plug it into the power supply.

3. If necessary, secure the wireless module in the selected operating position using the preassembled Velcro® tape. In doing so, ensure that the rod antenna is vertically positioned.

4. Pair the wireless module of the milling and grinding unit as described in the installation instructions included with the wireless module (REF 62 80 064).

You can pair multiple milling and grinding units with a CEREC acquisition unit. If more than 2 milling and grinding units are operated at once, the limited data bandwidth may cause processing time delays.
5.4.7.7.2 CEREC Radio Device

Creating a network

The supplied network devices have not as yet been part of a network. To enable several networks from various operators to be created next to one another or in the same area, new network devices must first form a network. This is described in the following section.

To create a new network with several new network devices, perform the following steps:

1. Place all network devices in the same area.
2. Switch all network devices on within one minute.
3. After switching on the last network device, wait approx. one minute.
4. Make sure that all network devices are connected, as indicated by the green LED; see section “LED displays” in the “CEREC Radio Device” operating instructions (REF 65 45 177).

All network devices now belong to a single network, which can be operated as an independent network, and can communicate with one another. In the event of problems, see section “Network creation failures” in the “CEREC Radio Device” operating instructions (REF 65 45 177).

Extending the network - adding a new network device

New network devices can be added to an existing network. To prevent random network devices from becoming part of the network, the user must perform the following steps:

1. Place the new network devices next to a network device that is part of the network.
2. Switch on the new network devices.
3. Switch the existing network device off and on again within one minute.

After one minute the new network devices will become part of the network.

IMPORTANT

A network with CEREC Radio Devices can include up to three network devices. Larger networks are not possible.
5.4.8 Filling the water tank

NOTE
Using the tank cap opener
If you find the tank cap, tank drain or filter insert hard to open by hand, use the tank cap opener (see "Using the tank cap opener").

5.4.8.1 Water tank MC / MC X

The water tank is drained, see "Removing water from the unit".
1. Pull out the water tank at the front of the unit.
2. Turn the tank cap counter-clockwise and take it off.

NOTE
Damage to surfaces!
In the undiluted state, the coolant additive DENTATEC disintegrates plastic surfaces and can cause discoloration.
➢ Do not place DENTATEC on the unit.
➢ Do not spill DENTATEC.

3. Add approx. 75 ml of DENTATEC to the tank.
4. Fill the tank with water until the filter insert is completely immersed (up to the bottom edge of the cover thread, approx. 3 liters).
5. Wait for a short time until the filter insert is completely soaked; then add an appropriate amount of water.
6. Close the water tank by tightening the tank cap clockwise by hand. **Do not use the tank cap opener for this.**
7. Push the water tank back into the housing.
8. Switch the unit on (see Switching the unit ON and OFF [→ 36]).
9. Switch the pump on (press the “Pump” button) to fill the water circuit.
10. Fill the water tank up again until the filter insert is completely immersed (up to the bottom edge of the cap thread).
5.4.8.2 Water tank CEREC MC XL Basic

Water tank

| A | Filter insert | C | Tank |
| B | Tank cap      | D | Tank drain |

✓ The water tank is drained, see "Removing water from the unit".
1. Pull out the water tank at the front of the unit.
2. Turn the tank cap counter-clockwise and take it off.

**NOTE**

**Damage to surfaces!**
In the undiluted state, the coolant additive DENTATEC disintegrates plastic surfaces and can cause discoloration.

➢ Do not place DENTATEC on the unit.
➢ Do not spill DENTATEC.

3. Add approx. 75 ml of DENTATEC to the tank.
4. Fill the tank with water until the filter insert is completely immersed (up to the bottom edge of the cover thread, approx. 3 liters).
5. Wait for a short time until the filter insert is completely soaked; then add an appropriate amount of water.
6. Close the water tank by tightening the tank cap clockwise by hand. **Do not use the tank cap opener for this.**
7. Push the water tank back into the housing.
8. Switch the unit on (see Switching the unit ON and OFF [→ 36]).
9. Switch the pump on (press the "Pump" button) to fill the water circuit.
10. Fill the water tank up again until the filter insert is completely immersed (up to the bottom edge of the cap thread).
5.4.9 Switching the unit ON and OFF

**NOTE**

Do not put the unit into operation at low temperatures!
If you move the unit to the operating site from a cold environment, condensation may form and result in a short circuit.
Within the machine, grease depots are included for lubricating components that can cause error messages at low temperatures.

- ✓ Install the unit at room temperature.
- ▶ Wait until the unit has reached room temperature and is absolutely dry (for at least one hour)
- ☑ The unit is dry and can be put into operation.

**NOTE**

Do not adjust the line voltage
The unit automatically adjusts to the line voltage.

Switch on the unit

✓ The milling and grinding unit is connected to the power supply.
1. The main switch on the rear side of the unit is set to position I (ON).
2. Press the ON/OFF button on the front panel.
✓ The unit switches on and the display lights up.

![Power-up display]

*Power-up display*

When the milling and grinding unit is switched on, the display shows a picture of the milling and grinding unit trying to contact the PC.

You can start or stop the water pump by pressing the "Pump" button (C). This enables you to drain the water circuit without connecting to the PC (e.g. prior to transport) or fill the water circuit during startup.

You can call up the IP address by pressing the "Config" button (D). You can configure the milling and grinding unit in the network with this address.
Switching the unit off

- The unit has finished the machining operation.
- Briefly press the ON/OFF button on the front panel.
- When you let go of the button, the unit switches off.

5.5 Repacking

**NOTE**

Repack only drained units!

Drain the unit! See "Removing water from the unit".

- The water tank is empty.
- The main switch on the back side of the unit is set to the 0 (OFF) position.

1. Disconnect the power cable and the connecting cable from the back side of the unit and stow them away.
2. Stow away the calibration tools in the drawer.
3. Check the unit for completeness according to the scope of supply!
4. Pack the unit securely.

5.6 Scope of supply

The detailed scope of supply is specified in the document "Checklist CEREC MC/MC X".

5.7 Storage

**NOTE**

Repack only drained units!

Drain the unit! See "Removing water from the unit".

Store the unit in a closed and dry room at a temperature of -10°C to 50°C for a maximum period of 12 months.
6 Operation

CAUTION
Risk of injury on calibration pins/instruments
If you reach into the processing chamber (e.g.: when inserting/removing a ceramic block, changing instruments, or inserting/removing a calibration phantom), you may injure your hand on the calibration pins/instruments.
Be careful not to brush against the calibration pins/instruments with your hand.
Always insert your hand in the processing chamber underneath the calibration pins/instruments.

6.1 Configuration (CEREC MC/MC X)

In the "Devices" area of the CEREC SW software, various settings can be subsequently modified.
1. Click the "Configuration" button in the system menu.
2. Click on the "Devices" button.
3. Click on the unit that you wish to configure.

Bar code reader
If a bar code reader is used, e.g. for inCoris ZI, the corresponding box must be activated. The bar code reader will then always be used to read a bar code.

Extraction Unit
If a suction device is connected, and the check mark is set, the dry milling process is automatically started when processing zirconium oxide. To deactivate dry milling, you can remove the check mark once again.
6.2 Calibrating the unit

**NOTE**
*Use only the supplied calibration tools*
Use only the supplied calibration pins and the corresponding calibration phantom when calibrating the unit.

**Unit calibrated ex works**
The unit is calibrated at the factory. No additional calibration is required during initial startup. Proceed as described below when performing a subsequent calibration.

**NOTE**
*Incorrect milling or grinding result*
If the unit is not calibrated, the milling or grinding result may be faulty.

**Preparing a calibration**
1. Take the calibration pins and calibration phantom out of the drawer of the unit.
2. In the software, navigate to the system menu, and click on the "Configuration" button.
3. Click on the "Devices" button.
4. Click on the unit that you wish to calibrate.
5. Click on the step "Calibrate".
   - The milling and grinding unit then moves into position to insert the calibration tools.
   - A dialog box prompts you to insert the calibration pins and the calibration phantom and to close the processing chamber door again.
6. Click on the "Start" button.

**Inserting the calibration pins and phantom**
1. Press the catch of the processing chamber door and open the door.
2. Loosen the instruments with the torque wrench and remove them.
NOTE
Grasp the calibration phantom correctly
Grasping the calibration phantom by its wide surfaces may cause calibration errors.
➢ Always grasp the calibration phantom by its clamping shank (A) when removing it from the storage box.
➢ Always grasp the calibration phantom by its narrow surfaces B when inserting it into the block fixing.

3. To insert the calibration phantom into the block fixing, grasp it by its narrow surfaces B.
4. Clamp the calibration phantom with the ball pressure screw. Use the block clamp tool for this purpose.
5. Insert the calibration pins in the motor mount by hand. Tighten the corresponding chuck with the torque wrench until a clicking sound can be heard.
6. Close the processing chamber door.

Performing a calibration
➢ Confirm your selection in the "Calibrate milling unit" window with the "Start" button.
   ✔ The automatic calibration begins and takes approx. 14 minutes. Wait until the calibration has been completed.

Inserting instruments
1. Open the processing chamber door following calibration.
2. Loosen the calibration pins with the torque wrench and remove them.
3. Loosen the ball pressure screw.
4. Remove the calibration phantom by grasping it by its narrow surfaces (B).

NOTE
Store the calibration tools in a safe place
Store the calibration pins and the calibration body in a safe place (e.g. in a storage box in the unit drawer).

5. Insert the instruments in the motor mount by hand. Tighten the corresponding chuck with the torque wrench until a clicking sound can be heard.
6. Close the processing chamber door.
   ✔ The dialog box for selecting the instruments then appears.
7. Select the inserted instruments and confirm by clicking the "Start" button in the window.
   ✔ The motor mounts move to their starting positions.
   ✔ The "Calibration succeeded" dialog box appears.

Exiting the calibration
1. Click on the "OK" button.
2. Click on the step "Exit Configuration".
6.3 Replacing the set screw

1. If a block is inserted in the block fixing, remove it.
2. In the software, navigate to the system menu, and click on the “Configuration” button.
3. Click on the “Devices” button.
4. Click on the unit whose set screw you wish to replace.
5. Click on the step “Change set screw”.
   - The milling and grinding unit moves into position (12 o’clock position) to insert the set screw.
   - A dialog box prompts you to replace the set screw and close the processing chamber door again.
6. Remove the worn set screw using the block clamp tool.
7. Take a new set screw out of the drawer of the unit, insert it, and secure it in place using the block clamp tool.
8. Click on the “Ok” button.

NOTE
Not to be confused
Do not confuse the set screw with the ball pressure screw!

NOTE
Wear to the set screw
Replace the set screw every 1000 clamping procedures or if the pin has broken off.
6.4 Machining process

6.4.1 Process types

Various process types are available for milling and grinding purposes. These vary in terms of the type of materials to be processed and the instruments to be used.

6.4.1.1 Grinding

For grinding purposes, use the following instruments as well as the appropriate torque wrench:

<table>
<thead>
<tr>
<th>Instrument</th>
<th>REF</th>
<th>Torque wrench</th>
<th>Clamping format of the force transmission</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step Bur 12 S</td>
<td>6240167</td>
<td></td>
<td>Triangular</td>
</tr>
<tr>
<td>Step Bur 12</td>
<td>6260025</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Cyl. Pointed Bur 12 S</td>
<td>6240159</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Step Bur 20</td>
<td>6259597</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Cyl. Pointed Bur 20</td>
<td>6259589</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6.4.1.2 Milling

The milling option is available from the following serial numbers onwards:

<table>
<thead>
<tr>
<th>Machine type</th>
<th>Serial number (wet milling)</th>
<th>Serial number (dry milling also with retrofit)</th>
</tr>
</thead>
<tbody>
<tr>
<td>MC X</td>
<td>231001</td>
<td>236001</td>
</tr>
<tr>
<td>MC</td>
<td>202001</td>
<td>202501</td>
</tr>
</tbody>
</table>

Other machines must be equipped with the milling starter kit for closed motors (REF: 64 51 079) (only for wet milling).

IMPORTANT

The milling process is supported in the CEREC software from version 4.3 onwards.
Activating the milling option

1. Select "Configuration\t"Settings\t"Milling".
2. Check "Activate".

**Instruments and torque wrenches**

For milling purposes, use the following instruments as well as the appropriate torque wrenches:

<table>
<thead>
<tr>
<th>Instrument</th>
<th>REF</th>
<th>Torque wrench</th>
<th>Clamping format of the force transmission</th>
</tr>
</thead>
<tbody>
<tr>
<td>Finisher 10 (dry and wet)</td>
<td>6299387</td>
<td></td>
<td>Triangular</td>
</tr>
<tr>
<td>Shaper 25: Milling (dry)</td>
<td>6299395</td>
<td></td>
<td>Triangular</td>
</tr>
<tr>
<td>Shaper 25 RZ: Milling (wet)</td>
<td>6433440</td>
<td></td>
<td>Square</td>
</tr>
</tbody>
</table>

**6.4.1.3 Permitted instrument combinations**

Depending on the materials to be processed and the process type used, various instrument combinations are permitted.

For an updated table of approved instrument combinations, please visit http://www.dentsplysirona.com/manuals. Select your product there and then open the "Bur table" document.

**6.4.2 Preparations**

- Download or design a restoration (see operator's manual).
- When the "Milling" option is activated, in the "Select Material" material selection step, you can choose between the "Grinding" and "Milling" manufacturing processes for plastic and zirconium oxide materials.
- You are in the "MANUFACTURE" phase and have selected the milling and grinding unit, tested the settings, and positioned the restoration in the block.
- Click on the "Start Milling" step.
- The milling and grinding unit moves into position to insert the set screw.
6.4.3 Starting the machining processes

- The instrument sets are equipped with the required instrument combinations for the machining process.

1. Depending on the configuration, you will be prompted to enter the bar code (see also "Entering the bar code").
2. Press the catch of the processing chamber door and open the door.

**NOTE**

Error message during touch process!
Always be sure to insert the ceramic block that you selected for the restoration. Otherwise an error message will be displayed during the touch process.

3. Place the selected ceramic block in the block fixing.
4. Clamp the ceramic block with the ball pressure screw. Use the block clamp tool for this purpose.
5. Close the processing chamber door and confirm the procedure by clicking "Start".
   - The estimated time required for the machining process will then appear in a message window.

**NOTE**

Ending the machining processes
You can abort the machining process at any time by pressing the "Stop" button.
6.4.4 Ending the machining processes

1. When the machining process has been completed, open the processing chamber door.
2. Remove the restoration.

**WARNING**

Risk of injury on the remainder of the ceramic block
The remaining portion of the ceramic block may have sharp edges (e.g. A) that could injury you if it is not removed carefully.
Always grasp the remainder of the ceramic block by its metal holder.

3. Loosen the ball pressure screw.
4. Remove the remainder of the ceramic block.
5. Close the processing chamber door.

**CAUTION**

Do not use defective milling or grinding results!
Machining results must be judged by the user (dentist or dental technician) and must not be used if defects are detected!

**NOTE**

If you have not used the milling and grinding unit for a rather long time, we recommend you should switch it off and then open the processing chamber door so that the processing chamber can dry out.
6.4.5 Information on the seal of approval

Proper selection and processing of the material are decisive for the long-term clinical success of the restoration, especially in the case of zirconia. However, different types of zirconia require individually matched machine parameters. This is the reason why you can and must select different types of zirconia in the software. These machine parameters are coordinated between material partners in complex development processes. In addition to the desired fit and surface quality, they also guarantee a maximum degree of material and equipment safety. Consistently high quality of the grinding or milling result and the fit can be guaranteed and damage to the processing machines can be excluded only if certified materials are used.

**NOTE**

Block without seal of approval

If a block is found without a seal of approval during the machining process (milling or grinding), the following message appears: "No quality label was recognized on the block. The grinding and milling processes as well as the instruments are specially verified for certified materials. Certified materials can be identified by the engraved "inLab" lettering on the block. The use of zirconium oxide materials without quality label can lead to inferior results as well as increased wear on the device and instruments. Do you still wish to start the manufacturing process?"

6.5 Entering the bar code

Barcode Reader active

If you have activated the option "Barcode Reader" in the system configuration dialog (e.g. for CEREC Zirconia), you must read-in both bar codes with the bar code reader. To do this, hold the bar code reader tilted to a slight angle and move it over both of the bar codes on the block continuously and evenly.

If the reading process fails, you can read-in the bar code once again by pressing "Retry" (button 1 on the unit display). Alternatively, you also can enter the substitute code (8-digit character string, e.g. *1234XYZ) on the PC manually.

No bar code reader available

➢ Enter the substitute code (8-digit character string, e.g. *1234XYZ) on the PC manually.
6.6 Manual block clamp

**NOTE**

Wear of the ball pressure screw
The high clamping forces cause wear of the ball pressure screw.
➢ Replace the ball pressure screw every 500 clamping operations.

**NOTE**

Fasten the block tightly
If the block is not tightened sufficiently, this may result in falsification of the machining result and fracturing of its ceramic material.
➢ Tighten the block securely with the block clamp tool.
➢ Check to make sure that the block is seated very firmly.

1. Insert the block (A).
2. **Clamp** the ceramic block securely with the ball pressure screw (B). Use the block clamp tool for this purpose.
   ➢ The block is pressed laterally against the contact surface of the block fixing and simultaneously pulled in axially. The plate of the block holder thus rests on the block fixing.
7 Service

**NOTE**
Observing country-specific Regulations!
Some countries have legal regulations which require regular safety inspections of electrical devices or systems by the operator.

**NOTE**
Perform maintenance regularly!
Have maintenance performed on your unit annually by trained technical personnel / a service engineer.

**NOTE**
Observing error messages
You must observe error messages shown on the display or in the software. If the error message does not disappear even after you have performed the prompted action, contact your service engineer.

**NOTE**
Machine care
Interval: Once a month
➢ Change the filter (see Changing the filter)
➢ **Clean** the clamping cones of the instruments according to the cleaning set instructions (REF 61 77 161).
➢ If the jets of water do not strike the instruments, carefully remove any foreign particles from the water nozzles with a probe.

**NOTE**
Processing chamber wet cleaning process
Interval (if dry milling is predominantly used): Once a week or in the case of heavy soiling.
➢ Clean the processing chamber.

**NOTE**
Do not confuse the block screw with the ball pressure screw
When operating a CEREC 3 grinding unit and a CEREC MC/MC X in the same room, be careful not to confuse the block screw of the CEREC 3 with the ball pressure screw of the CEREC MC/MC X.

**NOTE**
Using the tank cap opener
If you find the tank cap, tank drain or filter insert hard to open by hand, use the tank cap opener (see "Using the tank cap opener").

**NOTE**
Wear of the ball pressure screw
The high clamping forces cause wear of the ball pressure screw.
➢ Replace the ball pressure screw every 500 clamping operations.
7.1 Using the cleaning hose and the wet cleaning process

The processing chambers of devices used for dry milling of zirconium oxide should be cleaned regularly in order to prevent deposits of zirconium oxide dust in the chamber. A second cleaning hose with a nozzle can be used before the wet cleaning process in order to support the user when sucking zirconium oxide dust out of the device's processing chamber. This hose is available separately as a spare part (REF 65 89 795). We recommend carrying out this cleaning procedure (or the wet milling of a restoration) at least once per week if the device is used for dry milling of zirconium oxide.

Proceed as follows to use the cleaning hose and to execute the recommended wet cleaning process:

1. Remove the normal hose which is connected to the milling/grinding unit.
2. Connect the cleaning hose to the upper opening of the suction device.
3. Activate the manual operation for the suction device by setting the switch at the top of the device from "Auto" to "On".
4. Suck up the dust from the chamber as required.
5. Sucking up as much dust as possible from the workpiece axis is recommended. You must also always remove the dust from the bottom of the impact pane of the block axis (see arrow).
6. Once the chamber has been cleaned using the suction device you should complete the wet cleaning process lasting 30 seconds as programmed in the software 2 to 3 times as required in order to remove any accumulated material. This function is in the "Device configuration ..." area of the CEREC SW / CEREC Premium SW software if you click on the "Service" button and then on "Start a cleaning process." Alternatively, you can also wet grind a normal restoration with the same effect.
7. You can remove any zirconium oxide deposits in the lower part of the workpiece axis with a nylon brush between the wet cleaning processes.

7.2 Cleaning the unit with MC Care liquid

1. Clean your unit once per week with the MC Care liquid provided.
2. Please refer to the operating instructions provided with the MC Care liquid.

7.3 Changing filter bags and HEPA filters

Changing filter bags

If there is a significant fall in suction power, the filter bag could be full and will need replacing.

**NOTE**

We recommended replacing the filter bag for the CEREC suction device after approx. 120 restoration units. This number may differ depending on the amount of zirconium oxide materials milled and suctioned.

1. Loosen the two knurled nuts (A) on the maintenance cover.
2. Remove the lid.
3. Remove the filter bag from the nozzle and put a new filter bag on.
4. Put the maintenance cover on and screw it down with the two knurled nuts.

**NOTE**

*Do not jam the filter bag*

Make sure that the cap is sealed properly and the filter bag is not jammed.
Changing HEPA filters

Replace the HEPA filter if suction power is still weak after replacing the filter bag. The HEPA filter is located behind the filter bag.

NOTE

Nature and source of the danger

We recommend replacing the HEPA filter for the CEREC suction device once the filter bag has been replaced around 3 to 4 times. This number may differ depending on the amount of zirconium oxide materials milled and suctioned.

1. Loosen the two knurled nuts (A) on the maintenance cover.
2. Remove the lid.
3. Remove the filter bag from the nozzle.
4. Then release and remove the two Phillips screws on the perforated sheet on the inside of the suction system.
5. Take the perforated sheet out.
6. Remove the dusty HEPA filter and insert a new HEPA filter.
7. Put the perforated sheet back on and screw it down with the two Phillips screws.
8. Put the filter bag back on again.
9. Put the maintenance cover on and screw it down with the two knurled nuts.

**NOTE**

Do not jam the filter bag
Make sure that the cap is sealed properly and the filter bag is not jammed.
7.4 Changing the water

7.4.1 General information

NOTE

Damage to the pump and drives!
Too high a proportion of ceramic in the cooling water will damage the pump and the drives.
Change the water regularly!

When the water is due to be changed, a message window appears on your monitor to remind you that it is time to change the water.

Preventing odors

All coolant additives contain a biodegradable preservative. Despite this, however, odors may still develop under unfavorable conditions.

Observe the following:

- Change the water at least once a week.
- With ambient temperatures above 25°C, change the water every 2 to 3 days to prevent foul odors.
- Drain the tank if you do not intend to operate the unit for more than one week.
- Clean the tank if the odors recur.
- Add the coolant additive DENTATEC and fill the tank up to the brim with water. Let it stand for at least 24 hours and then rinse it out thoroughly with water once again.

NOTE

Damage to surfaces!
In the undiluted state, the coolant additive DENTATEC disintegrates plastic surfaces and can cause discoloration.
> Do not place DENTATEC on the unit.
> Do not spill DENTATEC.

NOTE

Approved coolant additive
Use only DENTATEC as a coolant additive.
7.4.2 Changing the water

NOTE
Change the filter insert regularly!
Replace the filter insert every third water change or after around 75 restorations.

7.4.2.1 Water tank MC / MC X

To change the water, proceed as follows:
- The unit is switched on.
- No machining process is running.
1. Pull out the water tank at the front of the unit.
2. Open the drain opening.
3. Drain the water tank.
4. Turn the tank cap counter-clockwise and take it off. If you find the tank cap hard to open by hand, use the tank cap opener (see "Opening the tank cap").
5. Remove the filter insert from the tank and clean the filter thoroughly under running water.
6. Rinse the water tank.
7. Insert the cleaned filter with handle into the tank and press it firmly onto the base in the floor of the tank.
8. Close the drain opening.

**NOTE**

*Foaming not permissible!*

If any cleaning agents are used, this will create foam, which is not permitted.

Do not use any cleaning agents.

9. Add approx. 75 ml of DENTATEC to the tank.
10. Fill the tank with water until the filter insert is completely immersed (up to the bottom edge of the cover thread, approx. 3 liters).
11. Wait for a short time until the filter insert is completely soaked; then add an appropriate amount of water.
12. Close the water tank by tightening the tank cap clockwise by hand. **Do not use the tank cap opener for this.**
13. Push the water tank back into the housing.
To change the water, proceed as follows:

- The unit is switched on.
- No machining process is running.

1. Pull out the water tank at the front of the unit.
2. Open the drain opening.
3. Drain the water tank.
4. Turn the tank cap counter-clockwise and take it off. If you find the tank cap hard to open by hand, use the tank cap opener (see "Opening the tank cap").
5. Unscrew the side cap.
6. Remove the filter insert from the tank and clean the filter thoroughly under running water.
7. Rinse the water tank.
8. Insert the cleaned filter with its cap into the unit and screw it tight.
9. Close the drain opening.

**NOTE**

Foaming not permissible!

If any cleaning agents are used, this will create foam, which is not permitted.

Do not use any cleaning agents.
10. Add approx. 75 ml of DENTATEC to the tank.
11. Fill the tank with water until the filter insert is completely immersed (up to the bottom edge of the cover thread, approx. 3 liters).
12. Wait for a short time until the filter insert is completely soaked; then add an appropriate amount of water.
13. Close the water tank by tightening the tank cap clockwise by hand. **Do not use the tank cap opener for this.**
14. Push the water tank back into the housing.
7.5 Instruments

7.5.1 Overview of materials/instruments

7.5.1.1 CEREC MC
For an updated table of approved instrument combinations, please visit http://www.dentsplysirona.com/manuals. Select your product there and then open the "Bur table" document.

7.5.1.2 CEREC MC X
For an updated table of approved instrument combinations, please visit http://www.dentsplysirona.com/manuals. Select your product there and then open the "Bur table" document.

7.5.2 Changing instruments

NOTE

Regular replacement of the instruments
Change the instruments as soon as the system prompts you to do so.
- Milling instruments (wet grinding): Typically after no more than around 25 restorations. The type of material, block size and processing options may affect the service life.
- Shaper 25 (dry milling): After 50 restorations.
- Shaper 25 RZ (wet milling): After 30 restorations.
- Finisher 10 (dry and wet milling): After 50 restorations.

✔ The torque wrench from the draw of the milling and grinding unit is ready-to-hand.

1. In the software, navigate to the system menu, and click on the "Configuration" button.
2. Click on the "Devices" button.
3. Click on the unit whose instruments you wish to replace.
4. Click on the "Start" button.
   ▶ The motors travel to the change position for the instruments.
   The dialog box for changing the instruments opens.
5. Press the catch of the processing chamber door and open the door.

CAUTION

Risk of injury on instruments
If you put your hand in the processing chamber, you could injure it on the instruments.
Be careful not to brush against the instruments with your hand.
Apply the torque wrench as shown.

6. Loosen the worn-out or defective instrument with the torque wrench and pull it out manually.
7. **NOTE! Do not grease the instrument!** Insert the new instrument into the motor mount by hand. Tighten the corresponding chuck with the torque wrench until a clicking sound can be heard.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Incorrect milling or grinding results</strong></td>
</tr>
<tr>
<td>Interchanging instruments leads to faulty milling or grinding results.</td>
</tr>
</tbody>
</table>

8. Close the processing chamber door.
9. Select the instrument(s) you have inserted on the PC monitor and click "Start". You can also select the instruments on the milling and grinding unit (up/down arrow) and confirm with "Start".

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>

</table>

**Changing a defective instrument**

If an instrument breaks during the machining phase, the corresponding motor travels to the change position. A dialog box which marks the side with the broken instrument with a red cross then opens.

| ✓ The instrument is broken. |
| 1. Change the defective instrument as described above. |
| 2. Select the instrument which you have inserted. |
| 3. Press the "Start" button. |
7.6 Care, cleaning agents, and disinfectants

**NOTE**

Approved care, cleaning, and disinfecting agents
Use only care, cleaning, and disinfecting agents approved by Dentsply Sirona!

A continuously updated list of approved agents can be downloaded from the Internet on the online portal for technical documents. You can reach this portal at the address: www.dentsplysirona.com/manuals. Click on the menu item "General documents" and then open the "Care, cleaning and disinfection agents" document.

If you do not have access to the internet, please contact your dental depot to order the list (REF 59 70 905).

7.7 Cleaning surfaces

**NOTE**

Do not allow liquids to run into the ventilation slots!

7.7.1 Disinfecting

Wipe surfaces down with a surface disinfectant (wiping disinfectant). Observe the manufacturer’s instructions regarding restrictions for use.

7.7.2 Protection against medicaments

Due to their high concentrations and the substances they contain, many medicaments can dissolve, etch, bleach or discolor surfaces.

**NOTE**

Damage to the surface
Clean the surface immediately with a moist cloth and a cleaning agent.

7.7.3 Cleaning

Remove dirt, grime and disinfectant residue regularly using mild, commercially available cleaning agents.
7.8 Replacing the main fuses

**WARNING**

Electric shock
Disconnect the power plug at the unit end before replacing the fuses.

**NOTE**

Fuse type
Use only fuses of the same type in the fuse holder!

---

**Fuse holder**

<table>
<thead>
<tr>
<th>A</th>

<td>CC</td>
<td>Fuse holder</td>
<td>Fuse</td>
</tr>
</tbody>
</table>

Fuses: T5H250V Order No. 20 33,111

- The power plug must be disconnected.
- 1. Use a screwdriver to carefully pry off the cover of the fuses on the back side of the unit.
- 2. Pull out the fuse holder.
- 3. Replace the defective fuses.
- 4. Reinsert the fuse holder.
- 5. Close the cover.
7.9 Changing the filter

### NOTE
Change the filter regularly!
Clean the filter regularly and change it immediately when damaged. Otherwise, change it every 3 months.
If a message appears stating that the water pressure is too low, you must clean the filter or, if it is damaged, replace it immediately.

### CAUTION
**Filter**
Use only filters approved by Dentsply Sirona!

7.9.1 Water tank MC / MC X

1. Pull out the water tank at the front of the unit.
2. Turn the tank cap counter-clockwise and take it off. If you find the tank cap hard to open by hand, use the tank cap opener.
3. Take the filter insert out of the tank.

---

**Water tank**

<table>

<th></th>
<th>Filter insert</th>
<th>C</th>
<th>Tank</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Tank cap</td>
<td>D</td>
<td>Tank drain</td>
</tr>
</tbody>
</table>

- The tank is drained, see "Removing water from the unit".
- Pull out the water tank at the front of the unit.
- Turn the tank cap counter-clockwise and take it off. If you find the tank cap hard to open by hand, use the tank cap opener.
- Take the filter insert out of the tank.
4. Rinse the water tank.
5. Insert a new filter with handle into the tank and press it firmly onto the base in the floor of the tank.
6. Fill the tank, see "Changing the water" [→ 53].
7. Close the water tank by tightening the tank cap clockwise by hand. 
   **Do not use the tank cap opener for this.**
8. Push the water tank back into the housing.

**NOTE**

**Cleaning the filter**

Clean the filter approx. every 12 to 15 units under running water, but at least with every water change.

7.9.2 **Water tank CEREC MC XL Basic**

The tank is drained, see "Removing water from the unit".

1. Pull out the water tank at the front of the unit.
2. Unscrew the cover on the side and take it out of the tank along with the filter insert.
3. Rinse the water tank.
4. Insert a new filter with cover into the tank and screw it tight.
5. Fill the tank, see "Changing the water" [→ 53].

Filter insert: Order No. 61 29 519

**NOTE**

**Cleaning the filter**

Clean the filter approx. every 12 to 15 units under running water, but at least with every water change.
7.10 Removing water from the unit

You must remove the water from the unit if you will not be using it for a longer period of time or wish to transport it.

- No machining process is running.

1. Turn the device off.
2. Pull out the water tank at the front of the unit.
3. Drain the water out of the water tank through the drain opening and reinsert the water tank in the unit.
4. Switch the unit on.

**NOTE**

**Pump button active at power-up**

The "Pump" button appears on the display when the milling and grinding unit is switched on. You can start or stop the water pump by pressing this button.

5. Press the "Pump" key to switch the pump on.
   - The water pump then starts pumping the water out of the unit. Let the pump run until no more water escapes from the nozzles.
6. Press the "Pump" key to switch the pump off.
7. Pull out the water tank and empty it.
8. Push it back into the housing.
7.11 Using the tank cap opener

**NOTE**

Risk of damage to the tank

Use the tank cap opener *only for opening* the tank cap and tank drain. Do not use the tank cap opener for closing the tank cap. To close the tank cap and tank drain, it is sufficient to tighten them clockwise by hand.

Opening the tank cap

- The water tank has been pulled out and drained.
- Place the tank cap opener on the tank cap as shown, and take off the tank cap by unscrewing it counter-clockwise.

Opening the tank drain

- The water tank has been pulled out.
- Place the tank cap opener on the filter drain as shown, and take off the filter drain by unscrewing it counter-clockwise.
8 Technical description

8.1 System requirements

8.1.1 CEREC MC

The CEREC SW software must only be installed on CEREC acquisition units or on the 64-bit inLab PC (optional).

For all software generations 4.x and higher, CEREC AC Bluecam PC hardware version must be LN or higher (Windows 7, 64 bit). No hardware limitations for CEREC AC / AF / AI with Omnicam.

If necessary, upgrade your operating system.

The software version must be CEREC SW 4.2.0 or higher.

8.1.2 CEREC MC X

The CEREC SW / CEREC Premium SW / CEREC Premium CAM SW software must only be installed on CEREC acquisition units or on the 64-bit inLab PC (optional).

The software version must be either CEREC SW 4.2.0 or inLab SW 4.2.0 or higher.

For all software generations 4.x and higher, CEREC AC Bluecam PC hardware version must be LN or higher (Windows 7, 64 bit). No hardware limitations for CEREC AC / AF / AI with Omnicam.
8.2 Grinding and milling unit

8.2.1 General technical description

- Digital feed control with force monitoring for extremely sensitive processing
- Process-controlled tool drives
- Processing repeatability: +/- 25 μm

Grinding instruments

- Step Bur 12 S
- Cyl. Pointed Bur 12 S
- Step Bur 12
- Step Bur 20
- Cyl. Pointed Bur 20

Milling instruments

- Shaper 25 RZ (wet milling)
- Shaper 25 (dry milling)
- Finisher 10 (wet and dry milling)

10 Disposal

In accordance with Directive 2012/19/EU and national disposal regulations regarding old electrical and electronic devices, please be advised that such items must be disposed of in a special way within the European Union (EU). These regulations require the environmentally friendly recycling/disposal of old electrical and electronic devices. Such items must not be disposed of as domestic refuse. This has been expressed using the icon of the “crossed out trash can”.

Disposal procedure

We feel responsible for our products from the first idea to their disposal. For this reason, we give you an option to return our old electronic and electrical devices.

If you wish to dispose of your devices, please proceed as follows:

In Germany

To initiate return of the electrical device, please send a disposal request to enretec GmbH. You have the following options here:

- Use the ‘Returning an electrical device’ button under the ‘eom’ menu item on the enretec GmbH homepage (www.enretec.de).
- Alternatively, you can also contact enretec GmbH directly.

enretec GmbH
Kanalstraße 17
16727 Velten, Germany
Phone: +49 3304 3919-500
E-mail: eom@enretec.de

In accordance with the national disposal regulations regarding old electrical and electronic devices (ElektroG), as the manufacturer, we assume the costs for disposing of the electrical and electronic devices in question. Disassembly, transport and packaging costs shall be borne by the owner / operator.

Prior to disassembly/disposal of the unit, it must be prepared professionally (cleaned/disinfected/sterilized).

If your unit is not permanently installed, it will be collected from the practice. If it is permanently installed, it will be picked up curbside at your address by appointment.

Other countries

For country-specific information on disposal, contact your local dental dealers.
